

SR PACKAGING PCR PET KILNER JARS

SECURE-SEAL SCREW-TOP GEN II

PET body with a screw-top closure hinged by a bale-wire, featuring an inner plug for maximum leak protection.

Featuring a Removable Inner Plug.

UNI-SEAL SCREW-TOP GEN III

PET body and a bale-wire hinged screw-top, utilizing an advanced integrated seal that eliminates the inner plug.

Advanced Seal-integrated Screw-top

Overview

Both the **SECURE-SEAL SCREW-TOP (GEN II)** and **UNI-SEAL SCREW-TOP (GEN III)** blend vintage aesthetic appeal with modern plastic engineering. Built for premium skincare, body care, and bath formulations (such as body butters, scrubs, salts, and thick creams), both designs replace fragile traditional glass with durable PET while retaining the iconic bale-wire hinge.

Shared Key Benefits

- **Hinged Screw-Top Design:** Combines a threaded closure for a secure mechanical seal with a bale-wire hinge to keep the lid attached, preventing dropped or lost caps during consumer use.
- **Durable & Lightweight PET:** Offers high clarity and a premium look while remaining shatter-resistant and significantly lighter than glass, reducing shipping costs and carbon footprints.
- **Identical Volume Range:** Both lines come in standard capacity options matching product line extensions.

Key Differences

The primary distinction between the two designs lies in their **sealing mechanism** and **component assembly**:

SECURE-SEAL SCREW-TOP 2-piece closure (Cap + LDPE inner plug) | Physical plug barrier.

UNI-SEAL SCREW-TOP 1-piece closure (Integrated uni-seal) | One-step opening.

Summary Recommendation

- Choose **SECURE-SEAL SCREW-TOP (GEN II)** for **maximum transit security** and a traditional ritual where a separate inner plug provides a visible physical barrier against spills and evaporation.
- Choose **UNI-SEAL SCREW-TOP (GEN III)** for **consumer convenience and streamlined packaging**, eliminating loose parts for a seamless twist-and-use experience without sacrificing leak protection.

Feature	SECURE-SEAL SCREW-TOP (GEN II)	UNI-SEAL SCREW-TOP (GEN III)
Seal Type	Multi-Piece Seal with separate LDPE inner plug	Integrated Uni-Seal inside the cap
Inner Plug Requirement	Yes — requires an additional LDPE inner liner/plug	No — plug-free design
Sealing Mechanism	Dual-barrier protection (threaded lid + physical plug insert)	Engineered direct seal integrated into the closure structure
Consumer Experience	Traditional unboxing feel; user removes the inner plug before usage	One-step opening; user twists open and immediately uses formula
Packaging & Assembly	Requires placing and packing an extra interior component	Streamlined filling/capping process with fewer total parts
Target Application	Formulations requiring redundant barriers against leakage during rough transit or high-viscosity oils prone to creep	Brands prioritizing convenience, minimalist componentry, and rapid, frictionless application
