Making Tech Risk & Cyber Easier - 2 * Founder

Information security doesn't have to be hard.

Start by making a list of 'stuff' that you do on the internet.

Where do you give personal information – like:
Name, Address, Passport details.

Use a password vault, OR device password Keys.

Create a recovery device for your e-mails, crypto exchange – other apps that offer the opportunity.

Just get started – It keeps you safe online.
