KIT Managed

Your Complete IT – One Team, One Call, One Invoice

Many growing businesses rely on a mix of systems to keep daily operations running.

Your ERP sits at the centre of this, supported by email, devices, security, backup and connectivity.

In many organisations these areas are managed separately – sometimes by different providers, sometimes internally. Over time this can make it harder to maintain consistent security, visibility and support across the whole environment.

KIT Managed brings these elements together under one team.

The Challenge

As businesses grow, IT responsibilities often expand gradually.

Email may be managed by one provider, security tools by another, network infrastructure by a third, and the ERP supported separately. Each provider focuses on their own area, but few have visibility across the entire environment.

When issues arise, diagnosing the cause can take longer because different systems and providers are involved.

At the same time, security threats continue to evolve. Compromised accounts, phishing emails and unpatched devices are among the most common entry points for attackers.

KIT Managed replaces this fragmented approach with a single, coordinated IT environment.

Feature	Entry Mobile	Entry	Core	Secure+
Ideal for:	Mobile-only staff - drivers, delivery, yard - whose primary device is a phone or tablet.	Desk-based staff needing a managed, secured PC with core endpoint protection and backup.	The standard choice. Ideal for most branch, warehouse and office teams, providing full device lifecycle and phishing training on top of Entry.	Businesses with regulatory, insurance or higher-security requirements (SIEM, advanced email, compliance-grade).

What This Means for Your Business

+ Simpler IT management

When IT is managed by one team, issues are resolved faster because the full environment is visible in one place. Devices, email, security and ERP connectivity are all supported together.

+ Stronger security by default

Every KIT Managed tier includes identity monitoring, email filtering and endpoint protection. Threats can be detected and addressed before they develop into incidents.

+ Predictable monthly costs

Microsoft 365 licensing is included in every tier. A simple per-user model replaces multiple supplier invoices and licensing renewals.

Why KIT

+ **ERP-aware IT**

  Klipboard builds and supports ERP systems used by thousands of businesses. Our IT teams understand how those systems operate in real environments.

+ **Published pricing**

  Clear per-user pricing removes the need for lengthy scoping exercises.

+ **Microsoft 365 licensing included**

  Licensing, configuration and security are handled together.

+ **One team, one call**

  A single support team manages your IT environment.

+ **Rapid response times**

  Support requests are acknowledged quickly so issues can be addressed without delay.

Dairygold – 250 users across multiple locations, delivering 99.9% uptime.

34,635 ERP customers globally. 3,500 users already supported by KIT.

The average cost of a compromise exceeds £120,000 – Preventative security measures significantly reduce this risk.

The median time to click a phishing link is under 60 seconds which is why identity monitoring and email protection are included in every tier.
