

Making Your Moodle Course Visible

Before students can see your course, you'll need to make it visible. You'll do this on the Course Settings page.

To find the course settings page, first click the icon of a gear at the top right of the page. You will see your main Administration block.

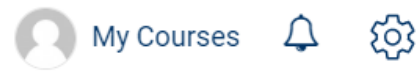

For this task, choose the Edit Settings link to open the settings page.

The main change you'll need to make is to find the Visible setting and change it from Hide to Show, in order to make the course visible to your students. You'll want to wait to do this until after you have added some content, most notably your Syllabus and Course Policy documents.

To see the other options on the page, click them individually or click Expand All at the bottom of the right-hand column.

Please do not add an end date to your course in Course Settings.

When you're finished changing your settings, scroll down and click Save and Display.
