

Hacked Online Bank Account

KB-AK027

1. Reduce discoverable personal context before an adversary can weaponize it. Audit public profiles, family posts, data-broker listings, school/activity rosters, old breach exposure, and household routines; remove or limit unnecessary details and teach family members to treat unexpected personalized contact as a verification trigger.
2. Avoid revealing where you bank, invest, work, receive benefits, store crypto, or manage important accounts. Keep financial and account details out of public posts and casual chats, and use account alerts so unusual access or payment requests are caught quickly. Apply this rule consistently across channels so the decision is governed by verification, documented evidence, and trusted review instead of the adversary's framing.
3. Separate claims from evidence. Verify identities, emergencies, brands, documents, and stories through independent sources before acting, and preserve screenshots or message headers when something seems staged or inconsistent.
4. Confirm identity through an independent contact path and ask for a detail the real person or organization can verify outside the suspicious conversation. Treat refusal, urgency, or channel switching as a stop signal. Apply this rule consistently across channels so the decision is governed by verification, documented evidence, and trusted review instead of the adversary's framing.
5. End the call and restart through a trusted number from a bill, card, portal, school directory, or official website. Do not provide codes, payment, remote access, or personal details to anyone who reached you first.
6. Protect accounts, devices, and finances with layered safeguards. Use password managers, passkeys or MFA, device updates, account alerts, transaction limits, and a rule that no one receives codes, remote access, or payment instructions through an unsolicited conversation.
7. Do not tap the supplied link or code. Open the known app or bookmarked site yourself, inspect the sender and domain, and report suspicious messages before deleting them. Apply this rule consistently across channels so the decision is governed by verification, documented evidence, and trusted review instead of the adversary's framing.
8. Use a password manager, passkeys or MFA, and official account recovery pages only. Never share one-time codes, recovery links, passwords, session tokens, or screen access with someone who initiated contact.
9. Create a pause-and-verify rule for Approval or Security Prompt Capture. Before acting, confirm the claim through an independent source, involve a trusted reviewer, preserve evidence, and refuse secrecy, payment, credentials, data, or device access until the request is verified. Apply this rule consistently across channels so the decision is governed by verification, documented evidence, and trusted review instead of the adversary's framing.
10. Prevent the adversary from shaping the victim's choices, information flow, or access to help. Keep outside counsel involved, preserve independent communication channels, and reject demands that limit what the target can read, say, verify, or disclose.
11. Make money, data, identity, labor, and access movement reversible, documented, and reviewable. Refuse gift cards, crypto, wire transfers, payment apps, check overpayment

schemes, credential sharing, and secrecy; use official support or bank fraud channels before complying.

12. Pause all payment movement and use a second reviewer before sending funds. Never use gift cards, crypto, wire transfers, payment apps, or overpayment refunds for unexpected requests; call the bank or merchant through verified channels. Apply this rule consistently across channels so the decision is governed by verification, documented evidence, and trusted review instead of the adversary's framing.
13. Escalate when safety, dignity, identity, reputation, devices, or family stability are at risk. Preserve evidence, involve trusted supporters, contact platforms, schools, banks, legal aid, or emergency services as appropriate, and prioritize the victim's physical and emotional safety over embarrassment.
14. Use a pre-agreed family verification phrase, call the person directly, and contact local emergency or institutional channels yourself. Do not send money, codes, travel details, or documents while panic is driving the decision.
15. Verify the sender domain, hover links before opening, and use a separate official channel for any request involving money, credentials, forms, files, benefits, school accounts, or account recovery.
