

ACCOUNT TAKEOVER: BANISH BOTS AND SAFEGUARD THE BUSINESS

Conventional defenses against account takeover (ATO) attacks often fall short, hampered by sluggish response times, frequent false positives, and restricted detection capabilities. Financial institutions, e-commerce platforms, and myriad other sectors are increasingly embracing advanced bot management solutions to fortify their ATO prevention efforts.

STEPS IN AN ACCOUNT TAKEOVER ATTACK:

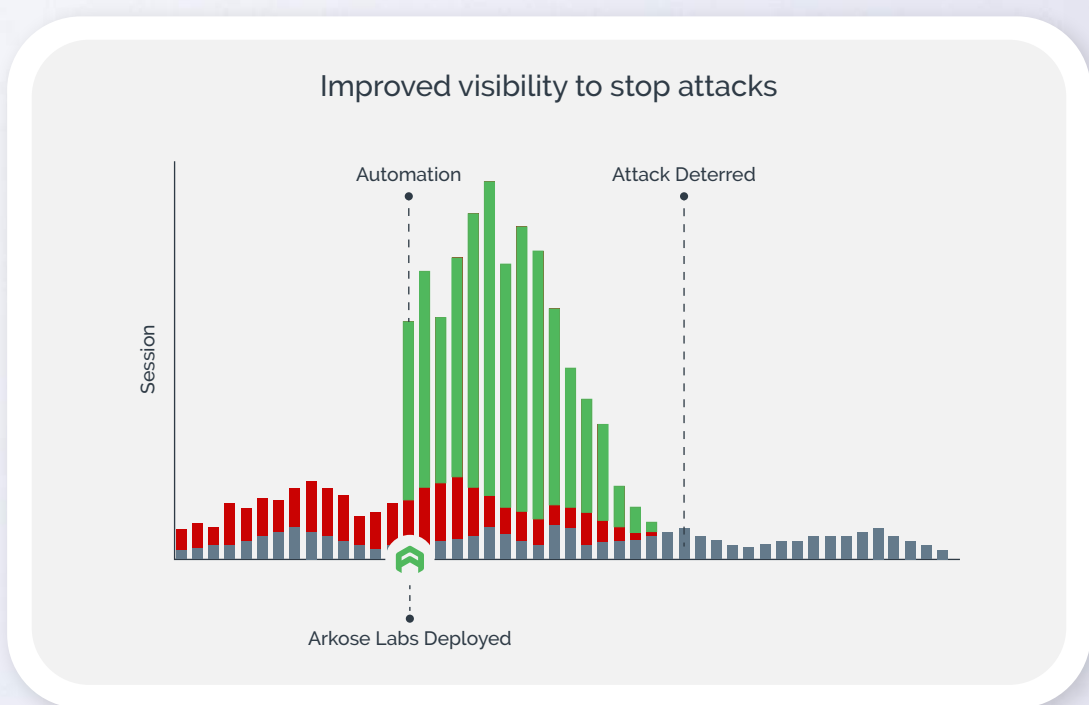

Cybercriminals...

Account takeovers (ATO) are stealthy, involving unauthorized access through various attack methods. ATO threats are often global and cross-border, and require strong security measures, including real-time monitoring and continuous bot prevention.

ARKOSE LABS STOPS ATO ATTACKS

Arkose Bot Manager employs advanced AI and real-time analysis to secure user accounts by thwarting complex ATO attacks and aiding businesses in making well-informed response decisions.

The strongest CAPTCHA to date, Arkose MatchKey, engages suspicious traffic with industry-leading challenges, rendering attacks economically unviable while preserving the good user experience.
