

350+ Fraud Prevention and Identity Security Executives

At MRC Las Vegas and Identiverse, 394 fraud prevention and identity security execs shared their device vetting approaches and challenges.

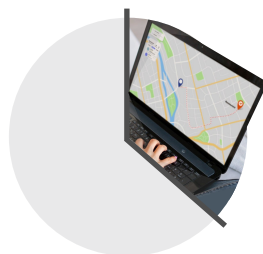

37%

struggle with fraud ring detection. Device intelligence exposes account sharing used by fraud rings.

17%

lack device ID solutions. Untrustworthy traffic slips through without protection.

29.5%

lack comprehensive device tracking. Historical behavior insights help determine device trustworthiness.

30%

use in-house device ID solutions. Heavy reliance on manual review creates efficiency gaps.

Arkose Device ID

Stop ATO, support chargebacks and refund disputes, identify account sharing, prevent risky payments

Why Merchants Choose Arkose Device ID

Confident identification: Cryptographic precision plus AI-powered similarity detection — recognizes devices even as fingerprints evolve

Instant visibility: Persistent recognition from the first interaction, with risk signals across every session

Unified device intelligence: One persistent Arkose ID combining stateless and stateful signals — no disruption to legitimate consumers

Complete protection: Secures every touchpoint across the consumer journey while keeping returning consumers friction-free
