

MeadowPatches

Our MeadowPatches provide a unique and effective way of establishing large clusters of wildflowers.

Patches can be installed directly on top soil in 100% coverage or in islands within seeded areas to establish species on restoration sites.

MeadowPatch™ Product Details

PRODUCT FORMAT

- MeadowPatches are native vegetation grown in a 35-40mm soil-less media and a fully biodegradable coconut fibre base.
- MeadowPatches are sold in individual pieces that are 27cm x 53cm (roughly 1.5 sqft each) and are 35-40mm thick.
- For shipping the product is stacked on a 48" x 48" pallet with 160 pieces - roughly 240 sqft.
- If product is very mature it may need to be shipped on a nursery rack

ORDERING & PROCUREMENT

- MeadowPatches are not a stock product. MeadowPatches are custom produced for each project with the specified species mix. We recommend planting MeadowPatches the same season they are grown for best results.
- Please confirm your orders by end of April each spring for production that season.
- Due to the growing format, MeadowPatches have a limited implementation window.

INSTALLATION GUIDELINES

- Soil requirements - Native plants are not fussy about soil conditions, use existing garden soil, a loam or screened topsoil.
- Level or contour soil as desired, ensure to remove any visible weeds prior to planting.
- Lightly wet the soil and apply a balanced organic fertilizer.
- MeadowPatches can be laid in a continuous 100% coverage approach, in individually pieces or cut into smaller divisions .
- Cut as needed with a utility knife.
- Ensure exposed edges are covered with soil.
- Water deeply immediately after planting and then every 2-3 days until plants have rooted into soil.

MAINTENANCE OVERVIEW

- Once established, MeadowPatch requires minimal maintenance.
- If used in a garden setting, we recommend cutting the previous years growth back early spring, Cutting back in spring allows seed heads to reach maturity and provides habitat for insects and food source for birds
- Fertilize at installation and If desired annually with a balance N-P-K controlled release product.

MeadowPatches

Product Details, Procurement & Installation

Product Overview

- Grown in 10" x 20" squares supported by biodegradable coconut mat
- Covers 1.5 sq ft each
- Single or multiple plant species per piece

- Quickly & easily establish patches of wildflowers
- Plants & seed bank delivered
- Save time without planting plugs

Shipping Methods

- For affordable shipping, trim and palletize
- 160 pieces or 240 sq ft shipped per pallet
- No plastic waste from nursery containers

- For high impact install, ship in full on nursery racks
- 45 pieces or 68 sq ft per rack
- No plastic waste from nursery containers

MeadowPatches

Product Details, Procurement & Installation

Installation

- Lightly wet topsoil and lay down fertilizer
- Patches can be laid directly on top of soil in 100% continuous coverage

- Patches can be installed in islands within seeded areas or cut into smaller pieces
- Ensure that edges of islands are covered

Maintenance

- Water deeply every 2-3 days to encourage roots to access soil below patch
- Once established MeadowPatches require very little maintenance and are drought tolerant

- If desired for manicured perennials beds, mow once annually to remove excess material
- Fertilize annually with balance N-P-K fertilizer if needed
