RT-2 Room Transmitter

Features

The RT-2 room transmitter is a small versatile device that is designed for containing or restraining pets in or from designated areas inside the home. It can be used anywhere inside the home, garage or basement. The RT-2 room transmitter is portable and can travel with you and your pet.

The AC Adapter has a 10-foot long cord, so it should accommodate most outlet configurations in the home.

The RT-2 room transmitter radiates a 360° signal up to 6 feet.

The RT-2 room transmitter is available in two frequencies and provides both non-encoded or encoded mode settings.

When the RT-2 room transmitter is set in the encoded mode, an ID code makes the system immune to interference from stray signals and provides "dual zones" in the signal field. In the first signal field, the pet receives a warning level stimulus that has been preset on the front of the transmitter. Its purpose is to warn the pet to turn back. Should the pet enter the second signal field, the receiver will automatically increase to a stronger stimulus.

The RT-2 room transmitter is a great way to keep pets off counter tops, furniture, out of special rooms or out of the garage!

The RT-2 room transmitter has a **Limited Lifetime Warranty** provided it is not damaged or abused.

A. The range indicator light serves as a power and range light. It gets brighter as you increase the range. More range is clockwise, less range is counter clockwise.

B. The correction level indicator light gets brighter as you increase the amount of correction. More correction is clockwise, less correction is counterclockwise.

C. The range control adjuster is recessed to prevent unwanted tampering. The field range can be easily adjusted by using a small screwdriver.

D. The correction level adjustment works only in the encoded mode. There are 32 levels of stimulation to choose from. This will set the amount of stimulation the pet will receive in the first signal field.

Please note: This unit does not have a power switch, if it is plugged in it is powered on.

Your Dog Guard® professional dealer will answer any questions that you have and also help you pick the equipment that is right for you and your pet.
