

PROCELL MICROCHANNELING

WHAT TO EXPECT

THE PROCESS

A pre-consultation history form will be sent followed by a complimentary phone or video call to begin the process. This allows us to review your goals, confirm there are no contraindications, and determine possible paths forward. If we decide to proceed, a strategy session will be scheduled. The strategy session is a \$100 in-person appointment applied toward your treatment cost when you book. During this appointment we will review your treatment areas, discuss your complete skin strategy, go over pre-care and post-care protocols in detail, take before photographs, and complete all required forms. A test patch will be performed if indicated. This session is designed so that your treatment appointment is focused entirely on results and time is given for any questions to be answered. Your appointments will be scheduled according to where you are in the pre-care process.

TREATMENT DAY

Please arrive having completed all pre-care steps. Most people tolerate this procedure well without the use of topical anesthetics, but we will ensure you are comfortable if needed.

- The treatment area will be cleansed and a topical numbing cream may be applied and allowed to absorb before treatment begins
- The ProcCell device is passed over the treatment area in a controlled pattern – most clients describe the sensation as mild pressure or light scratching
- Growth factor serums are applied during and immediately after treatment to maximize absorption through the open microchannels
- Treatment time varies by area – facial treatments typically take 30–60 minutes
- A hyaluronic mask and red light will be applied for a few minutes after treatment

IMMEDIATELY AFTER – FIRST 90 MINUTES

- The treatment area will appear pink to red and may feel warm, tight, or slightly tender – this is the inflammatory response that drives collagen production
- Do not touch the treatment area, apply any products, or expose it to sunlight during this window
- Microchannels remain temporarily open and absorptive – anything applied to the skin during this period enters directly

FIRST 24–72 HOURS

- Redness, mild warmth, and sensitivity are normal and expected – similar to a mild sunburn
- Mild swelling may occur, particularly around the eyes if that area was treated
- Skin may feel tight and slightly dry as it begins to repair
- Some clients experience mild peeling or flaking 2–3 days after treatment – this is normal cellular turnover
- Begin ProcCell Step 1 & 2 serums 24 hours after treatment as directed twice daily

DAYS 3-7

- Redness and sensitivity typically subside within 3-5 days
- Skin may feel smoother and more hydrated as surface healing completes
- Acne-prone clients may notice a brief breakout early in the series as existing congestion surfaces more rapidly – this is normal and typically resolves quickly

WEEKS 2-12

- Collagen remodeling continues for weeks after each session – results develop gradually and are not fully visible immediately after treatment
- Skin texture, tone, and firmness improvements become more apparent over time
- Do not assess final results after a single session – the full benefit builds across the Series Protocol

ONGOING

- Procell microchanneling requires a series of sessions for optimal results – typically 3-6 sessions spaced 2-4 weeks apart
- After the initial series, maintenance sessions every 6-8 weeks preserve results and support ongoing skin health
- Individual response varies based on skin condition, age, lifestyle, sun exposure history, and compliance with home care
- Hair rejuvenation protocol: 6 sessions spaced 2 weeks apart over 3 months, followed by maintenance every 3-6 months

RESULTS & EXPECTATIONS

- Results cannot be guaranteed – individual response varies
- Improvement is progressive – results continue to develop between and after sessions
- Home care compliance significantly affects results – consistent use of Procell serums between appointments is essential
- Final results also depend on lifestyle factors including sun exposure, hydration, nutrition, and smoking status

**Individual results vary. No outcomes can be guaranteed.*
