

Agile Manufacturing, Made Possible with FourKites

With the largest network of logistics tracking data and proprietary machine learning technology, the #1 real-time visibility platform from FourKites gives manufacturing supply chain leaders the power to maximize efficiency and avoid risk.

UNPARALLELED BUSINESS VALUE FOR MANUFACTURING

Improve Productivity

With real-time notifications and unprecedented ETA accuracy for incoming deliveries, you can maximize throughput on the production line and eliminate wasted staff time on status check calls.

3M, one of the world's leading manufacturers of N95 respirators, was able to meet the COVID-19 pandemic head-on, ramping up production from 22 million N95s per month in January to 95 million by the end of 2020 leveraging FourKites for real-time insight on its supply chain.

Lower Operating Costs

Transportation charges add up quickly. FourKites helps you minimize those risks by reducing dwell, optimizing labor planning and preventing product loss on temperature-controlled shipments.

In its first 8 months of using FourKites, Pixelle Specialty Solutions was able to reduce email volume to customer service teams by over 50%, and lower detention charges by 20% per month.

Deliver Superior Service

Increase your on-time delivery rate and give your customers full visibility along the way, with automated status notifications and live tracking dashboards.

"Automated reporting and tracking from FourKites provides more accurate and real-time data, which allows Canfor to respond to customer inquiries quicker and with up-to-date information on our upcoming shipments that would have otherwise had to be manually tracked."

Bob Hayes, Vice President, Global Supply Chain, Canfor

TACKLE INDUSTRY CHALLENGES WITH FOURKITES

Tight Production Schedules

Inbound Visibility Blind Spots

Fragmented Multimodal Networks

High Detention Charges

Eliminate Production Bottlenecks with Collaborative Visibility

Your competitive advantage lies in your ability to see into every corner of your supply chain — both for managed and vendor-managed inbound freight. FourKites delivers unprecedented visibility and data transparency on every load that matters to you.

Optimize dock utilization and reduce detention with complete inbound visibility.

Avoid line-downs and eliminate bottlenecks in production with inbound visibility.

Minimize safety stock and improve materials planning with live tracking and predictive ETAs for inbound material.

Leverage Powerful Machine Learning ETAs Across All Modes

FourKites offers the most accurate predictive ETAs possible, using aggregate data from over 2 million tracked loads per day and a proprietary machine learning algorithm.

Deeper Insights

Receive better insights for your supply chain through the analysis of 150+ factors, including real-time weather and traffic.

More Precise ETAs

Confidently plan global operations using accurate ETAs fine-tuned with location-specific tracking logic.

Unified Experience

Seamlessly track all freight across transportation modes in a single-pane-of-glass view of your logistics operations.

FourKites is more than a software platform, it's a full-service visibility solution. Contact us at hello@fourkites.com to discover the FourKites difference.
