

Learning Objectives

Understand the best point in the design process to define the security and technology requirements for a project.

Learn how integrating technology and security systems design into the overall building design process can produce much better outcomes.

Learn what owners and occupants expect to be available in a modern facility.

Understand how we can build our facilities with the future of technology in mind.

Implementing Integrated IT, Audio/Visual, & Security Solutions AIA Course: CRUX007.00

Course Description:

Through the use of integrated systems and common communications platforms, we can build buildings that are:

- Smarter
- Greener
- Less Expensive

Technology and security requirements should be included in the initial planning and design conversations to receive the most benefit.
