

JITC Ready for Voice, Data & Multimedia

Eventide®

Eventide's mission-critical recording and multi-domain solutions are trusted by armed forces worldwide to capture, secure, and reconstruct their most important interactions.

NexLog DX-Series FIPS-Compliant Version

Federal Information Processing Standard (FIPS)

With the same baseline features and functions as a standard NexLog DX-Series recording solution, Eventide offers a special-order FIPS-Compliant Version of the trusted Nexlog DX-Series software for DoD platforms. This software version meets the enhanced encryption and system security requirements for federal government applications.

Joint Interoperability Test Command (JITC) Ready

Recording solutions are considered a component of an overall federal communications system. When the NexLog DX-Series FIPS-Compliant Version is deployed, it is ready to be included in a JITC certification testing project. The software has been developed for compliance with DISA, FISMA, DoD, and NIST standards.

NexLog
Advanced Recording Solutions

DX
SERIES

Join the ranks of informed leaders leveraging the power of JITC-ready technology for multiple interfaces like VoIP/SIP, Analog, Avaya, Cisco and Oracle SBC.

The Eventide Advantage

- **Advanced Security:** JITC-ready technology demonstrates adherence to DoD security requirements for VoIP/SIP, Analog, Avaya, Cisco and Oracle SBC interfaces, ensuring data integrity and confidentiality.
- **Improved Interoperability:** Seamless integration into your existing systems for streamlined operations and reduced downtime. Phone, Dispatch, and Radio are consolidated in a single system with a unified interface.
- **Increased Efficiency:** Reliable and robust performance even in the most demanding environments – air, land, sea operations, and base facilities.
- **Sustained Compliance:** Regular updates to meet evolving NIST and STIG guidelines.
- **Made in the USA:** Based on COTS technology where possible and selected from vetted suppliers, all software development, testing, and assembly are completed in the USA.

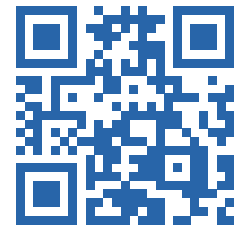

NexLog DX-Series FIPS-Compliant Version includes the following enhancements:

- Linux Ubuntu Operating System
- Security Technical Implementation Guides (STIG) Compliance
- FIPS 140-2 Compliance
- Shell Access
- Malware Protection and Antivirus Control
- Enhanced Auditing
- Authentication
- Disk Encryption at Rest
- VoIP, IP-Dispatch, and IP-Radio Support

Let us help you with your mission-critical recordings!
