

Projecto Mundo Azul marks new milestone for mangrove conservation in Ambriz

Azule Energy and its Block 18 partners have marked an important milestone in Projecto Mundo Azul, supporting efforts to protect Angola's mangroves through science, environmental education, community involvement and strengthened local conservation capacity.

The milestone was celebrated in Ambriz, Bengo Province, with the inauguration of environmental infrastructure supporting mangrove conservation and the launch of the Atlas of the Mangroves of Ambriz.

Implemented by Associação Otchiva, Projecto Mundo Azul is supported by the National Oil, Gas and Biofuels Agency (ANPG) and the Block 18 Contractor Group, operated by Azule Energy in partnership with Sonangol E&P and Sinopec.

The initiative reflects a shared vision in which economic development and environmental protection go hand in hand, with local communities playing a central role in protecting the natural resources on which current and future generations depend.

Mangroves play a vital role in coastal ecosystems.

They provide natural protection against erosion, store carbon, provide breeding grounds for numerous marine species and support the livelihoods of local communities.

Turning knowledge into action

A key moment was the launch of the Atlas of the Mangroves of Ambriz, which brings together scientific knowledge to support greater understanding, awareness and informed decision-making around this important ecosystem.

The new environmental infrastructure inaugurated through Projecto Mundo Azul will also help strengthen environmental education, scientific research and local capacity for the sustainable management and conservation of mangroves.

Central to the project is the involvement of local communities. Their knowledge, participation and commitment are essential to ensuring that conservation efforts deliver sustainable, long-term results.

Central to the project is the involvement of local communities. Their knowledge, participation and commitment are essential to ensuring that conservation efforts deliver sustainable, long-term results.

The initiative has been made possible through collaboration between the Provincial Directorate for the Environment, the Municipal Administration of Ambriz, the Ministry of Mineral Resources, Petroleum and Gas, ANPG, the Block 18 partners Sonangol E&P and Sinopec, Associação Otchiva, and local communities.

For Azul Energy, the project represents more than environmental conservation.

It demonstrates how partnerships can bring together scientific knowledge, environmental awareness and community participation to create environmental, social and economic value.

Through Projecto Mundo Azul, Azule Energy and its partners are contributing to the conservation of thousands of hectares of mangroves, while supporting environmental education, scientific knowledge and the development of capacity for their sustainable management.

Azule Energy remains committed to environmental conservation, sustainable development and supporting the communities that play an essential role in protecting Angola's natural heritage.
