Aderis

AI-native Finance.

Move to Live Finance and let AI agents run the accounting routine, on one platform.

Aderis is the Live Finance Platform. It runs accounting autonomously on an AI-native core, keeps every number traceable to source and orchestrates the full finance cycle across entities, ledgers and currencies in real time. Swiss company, built for DACH and Europe.

01 / WHY

Your business decides today. Your numbers are from yesterday.

Steering on last month's numbers costs speed and control. Capture, coding and reconciliation tie the finance team to manual routine, and the numbers arrive only after month-end. Leadership acts on the past.

Every new entity, currency and system makes it worse: each reporting cycle turns into a rebuild. And AI that sits as an add-on on top of the books cannot guarantee traceability. AI belongs in the core.

AI is changing finance. Not when, but how.

Sources: Gartner & McKinsey, 2026

30%
faster monthly close
with AI in finance workflows

5%
higher EBIT
from AI-enabled ERP

62%
of cloud-ERP spend
goes to AI

02 / HOW

AI-native from day one. No add-on.

AI-native core

No batch paradigm. Built for AI, not retrofitted. Finance runs continuously across every entity and ledger.

AI agents that act

Agents execute tasks, coordinate processes and hand over to the finance team whenever judgment is required.

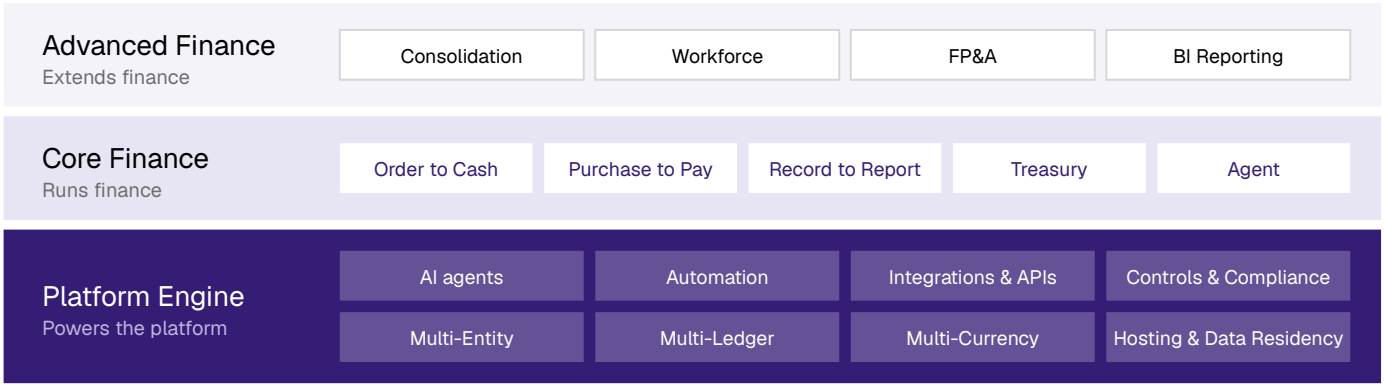

Finance system of record

Aderis holds the ledgers, not a layer on top. Every number stays traceable to source, every action auditable.

03 / WHAT

The Aderis Live Finance Platform

Automated accounting, controls, reporting and treasury across multi-entity, multi-ledger and multi-currency operations.

WHAT SETS IT APART

Accounting executes itself

Capture, coding, reconciliation, dunning and payment runs are performed by AI agents. Only uncertain cases reach your team.

Ada, your agent

Ask once, Ada does the rest: answers any question about your finances, completes tasks and creates reports, every answer traceable.

Continuous close

Statutory, tax and management ledgers stay synchronised across entities in real time. No more month-end scramble.

Reporting on the books

No data warehouse, no ETL, no overnight sync. Every booking is available live for analysis, as Excel or PDF.

One API for every way in

Interface, automations, scripts and AI assistants run through the same API. Banking, payroll and e-commerce connected.

Trusted by finance, IT and audit

Full audit trail, segregation of duties and role-based access. Data residency in Switzerland and EU.

04 / BENEFITS

The economics of Live Finance.

90%
automated
Repetitive finance tasks automated, reducing manual work.

24/7
live
Decision-ready numbers when it matters.

100%
traceable
Every number linked to source, workflow and approval.

STILL ON STANDBY?
