VERSION 3.5.1 · NOVEMBER 2026 · ENGLISH · DIBBLECOIN.COM

DOCUMENT HISTORY

Version 3.5.1 · November 2026

V3.5.1 UPDATES

Sale structure updated: Plante Sua Semente Ltda sells DBB in the Founding Guardians round and the public pre-sale, with payments in crypto only; fiat is not available at launch. Identity verification (KYC) tiers and waiting periods described. Genesis Contributors Base set at 30 days after the close of the pre-sale. The 25% and 50% release conditions defined as Market Placement tokens sold, as recorded on-chain in the LandRegistry. Founding Guardians tickets published. New risk line on the powers of the treasury multisig. Legal documents named: Terms of Use, Privacy Policy and Risk Disclaimer.

V3.5 UPDATES

Capital-raising structure described (Plante Sua Semente Ltda and multi-signature treasury); the definitive structure will be defined within 15 months after the close of the pre-sale. New section on buyer guarantees for the OTC and pre-sale phases and on payment methods. Release rules aligned with the smart contracts: Market Placement and the Strategic Reserve are released upon land-phase confirmation, with full 1:1 backing upon completion of Phase 4. The individual coordinate, staking, voting and the Dibble Wallet App are described as future stages. The first 100,000 hectares are all located in the Amazon.

V3.4 UPDATES

Global supply distribution restated to mirror the on-chain contract architecture: the public pre-sale (15,000,000 DBB) is shown as its own allocation line outside Market Placement; the Founding Guardians OTC allocation (30,000,000 DBB) is carved from within the 150,000,000 Team, Ecosystem and Genesis Contributors bucket (presented as 120,000,000 + 30,000,000); a Listing Liquidity line (15,000,000 DBB) is added. The total supply of 1,000,000,000 DBB will be issued once: 985,000,000 in the vesting vault and 15,000,000 of listing liquidity in the treasury multisig. Tokens leave the vault according to the rule of each allocation, never through new minting. The Founding Guardians 15-month lock-up will be enforced by the smart contract.

V3.3 UPDATES

Carbon price references migrated from the compliance market to the voluntary market; the Section 07 backing-value table replaced by a carbon stock reference block. Supply release mechanism documented for the first time: the public pre-sale distributes 15,000,000 DBB in five rounds of 3,000,000, and the remaining market-placement allocation is released exclusively upon confirmation of each land phase in the on-chain LandRegistry. Coordinate policy clarified. CEX listing policy aligned with the project's liquidity infrastructure. The Strategic Reserve does not participate in Phase 1. Founding Guardians access described as open registration with no NDA at any stage. Market data updated to the most recent published edition.

V3.2 UPDATES

Token distribution updated (Market Placement 620,000,000 · Team, Ecosystem and Genesis Contributors 150,000,000). Carbon credit language standardised to conditional form throughout, with the addition of the Carbon Credit Eligibility block establishing the four steps required for a credit to come into existence.

V3.1.1 UPDATES

Editorial precision adjustments and alignment with public materials. Founding Guardians tier structure and pricing moved to the restricted offering document, accessible through email registration via the official form.

V3.1 UPDATES

Removal of the Territorial Safeguard Clause; the 20% Strategic Reserve redefined as the early-exit staking substitution mechanism (contract continuity), with corresponding corrections across the executive summary, staking models and risk matrix.

V3.0 UPDATES

Final consolidation. Founding Guardians window extended to 30 days, with a founder own-capital coverage clause in case of below-cap fundraising. Full elimination of guaranteed-yield vocabulary — replaced by “projected, conditional share of leasing revenue”. New block “What Is a Promise and What Is an Estimate”. New section “Who This Project Is Not For”. Biodiversity co-benefits to be verified by the Dibble Intelligence Layer (CCB / SD VISta premium labels). Corporate demand table reclassified as target buyers, not clients.

SECTION 01

Legal notice and disclaimer

This whitepaper has been prepared by the Dibble Group for informational purposes only. In the current capital-raising phase, Plante Sua Semente Ltda (Brazil) is responsible for the land, the operations and the sale of DBB in the Founding Guardians round and the public pre-sale. Payments are accepted in crypto only (BNB or USDT, BEP-20) and go directly to multi-signature wallets with public addresses. The definitive structure will be defined within 15 months after the close of the pre-sale, with international legal counsel.

This document does not constitute a public offering of securities, an issuance prospectus, or an investment recommendation in any jurisdiction. Participation is not available to US Persons or to persons in sanctioned or restricted jurisdictions.

The DBB token is a digital asset linked to native forest registered phase by phase. Acquisition is subject to eligibility verification, compliance with local regulatory rules, and acceptance of the Terms of Use, the Privacy Policy and the Risk Disclaimer published on the official sale page by Plante Sua Semente Ltda.

Digital assets involve risks, including market volatility, regulatory changes and operational risks. Projections are based on recognized independent sources (BloombergNEF, Grand View Research) and do not constitute a guarantee of return. Every mention of participation in leasing revenue in this document is projected in nature and conditional on the effective corporate contracting of carbon credit leasing — never a promise of return.

> *DBB was not created to make anyone rich. It was created to leave something untouched. What we promise is the forest, standing, forever. What we estimate — and only estimate — is what the future carbon market may do for those who had the patience to preserve it.*

SECTION 02

What is a promise and what is an estimate

The Dibble Group's only promise is permanent preservation: each DBB token will correspond to 1 m^2 of titled, georeferenced and untouchable native forest, as each phase is registered. Any mention of leasing participation, appreciation or future revenue is a long-term estimate, built on market projections from independent sources (BloombergNEF, Grand View Research), conditional on certification, on effective corporate contracting, and on a global regulatory framework in constant evolution — with new laws and standards emerging almost monthly.

> *Estimates are not guarantees — and whoever claims otherwise in our name does not speak for us.*

©2026 Dibble Group — Plante Sua Semente Ltda · dibblecoin.com

SECTION 03

Who this project is not for

An honest word before we continue.

Dibblecoin was not created to make anyone rich quickly. It was created to leave something untouched — native forest that will remain standing after us.

The global carbon market is in full regulatory construction: new laws, standards and requirements emerge almost monthly. This means the horizons of this project are measured in years, not weeks. We offer no guarantee of appreciation, we project no wealth, and we do not compete with promises.

If your motivation is to multiply capital quickly, there are thousands of tokens on the market willing to promise you that. This is not one of them — and we would rather lose your allocation than earn your frustration.

If your motivation is to protect a real, measurable piece of a permanent legacy, then you are in the right place. That is all we promise: the forest, standing, forever.

SECTION 04

Executive summary

Dibblecoin (DBB) represents a new asset category: the Real World Asset (RWA) physically backed by native forest, starting with the Amazon — where all of the first 100,000 hectares will be located — with the vision of reaching other ecosystems in Brazil and worldwide afterwards, and with on-chain traceability on the BNB Chain. The definitive legal structure will be defined within 15 months after the close of the pre-sale.

Where most carbon projects operate only with rights over the credit — without ever owning the land — DBB is the land itself. Each DBB token represents 1 square meter of native forest that will be audited, registered, satellite-monitored and protected in a permanent, perpetual and irrevocable way.

> *We do not compete with paper carbon projects. We replace them.*

INDICATOR	VALUE / DESCRIPTION
Physical backing	1 DBB = 1 m² of native forest, in an area registered phase by phase
Phase 1 backing	30,000,000 m² / 3,000 hectares (acquisition in progress)
Total supply	1,000,000,000 DBB — fixed, issued once
Total goal	100,000 hectares in the Amazon / 1,000,000,000 DBB
Public pre-sale	15,000,000 DBB in 5 rounds of 3,000,000 · US$0.05 (Round 1) to US$0.35 (Round 5)
Strategic Reserve	20% (200,000,000 DBB) — contract-continuity mechanism: will substitute early-exit staking positions within its available capacity, once the staking contract is live
Guardian Node share	Up to 70% of net carbon credit leasing revenue — projected and conditional participation, not guaranteed
Blockchain	BNB Chain — EVM compatible
Certification (commitment)	Verra VCS + Gold Standard — simultaneous double certification (from Round 4), with biodiversity co-benefits intended to qualify for premium labels (CCB / SD VISta)
Legal structure	Current: Plante Sua Semente Ltda (Brazil) + multi-signature treasury · Definitive: within 15 months after the close of the pre-sale (direction: Switzerland)
Basis of backing	The token's value is anchored in the physical asset — titled land — independent of the prevailing carbon price

> *We do not sell a promise. We tokenize the land itself.*

SECTION 05

The problem: The paper carbon crisis

Recent Brazilian investigations exposed what the market already suspected: major REDD+ projects and certifiers were under investigation for issuing credits without verifiable physical backing. Projects that existed only in spreadsheets moved billions without a single tree being effectively protected.

There is an even more critical question that few ask: who owns the land that generates these credits? In most cases, the projects do not own the land — only the right to use the credit it generates. Land that can be sold, disputed, expropriated or deforested tomorrow. DBB was built to be the definitive answer to that question.

THE CORPORATE PARADOX: THE COCA-COLA CASE

ENVIRONMENTAL CHALLENGE	THE DATA
Largest emission source	Refrigeration — HFC gases 1,000x more potent than CO_2 (company estimate)
Refrigeration scale	2.2 billion beverage servings sold per day
Plastic pollution	Identified repeatedly, across successive annual audits, as the world's largest corporate plastic polluter
Net-Zero commitment	Net-Zero 2050 — requires certified credits for decades
Credit preference	Nature-based credits, Gold Standard / Verra VCS — the credit profile DBB intends to generate

THREE STRUCTURAL FRACTURES OF THE CURRENT MARKET

FRACTURE	WHAT HAPPENS	IMPACT ON THE HOLDER
Absence of land ownership	Credits issued over land not owned by the project — it can be sold or deforested at any time	Retroactive cancellation and total loss of value
Double counting	The same hectare sold to multiple buyers on different platforms	Value dilution and unresolved international litigation
Paris Article 6	Requires corresponding adjustments — credits without sovereign backing may progressively lose acceptance	Devaluation risk and loss of Net-Zero eligibility

WHY THE WINDOW IS NOW

- Paris Article 6 tends to progressively reduce the acceptance of credits without real physical backing
- The voluntary carbon market is projected to grow from US$5.3 billion in 2025 to US$52.4 billion by 2033, at a 32.2% CAGR (2026–2033) (Grand View Research, 2025)
- Net-Zero corporations need top-tier certified credits — and are running out of reliable options
- Projects with audited physical ownership are becoming scarce and strategic — exactly what DBB intends to represent
- In BloombergNEF's removal-only scenario — one of three regulatory pathways modelled in its Long-Term Carbon Offset Outlook (2022) — carbon removal prices could rise substantially by the end of the decade (third-party scenario, not a projection of outcomes and not a guarantee)

©2026 Dibble Group — Plante Sua Semente Ltda · dibblecoin.com

SECTION 06

The solution: Dibblecoin (DBB)

Dibblecoin is the direct tokenization of native forest with physical ownership to be audited, a legal structure to be consolidated, satellite monitoring, on-chain registration on the BNB Chain, and a conditional leasing participation model through non-custodial staking to be deployed.

> *The backing is registered by phase: each confirmed land phase is recorded on-chain in the LandRegistry, with the confirmation date and the hash of the phase documentation, which anyone can check against the published document. The individual coordinate of each square meter will be implemented at a future stage.*

THE DIBBLE GROUP ECOSYSTEM

ENTITY	FUNCTION
Dibblecoin (DBB)	The asset. RWA token, pre-sale and — once the staking contract is live — conditional leasing participation.
Dibble Reserve	Physical land management in Brazil. Oversight, land regularization and continuous monitoring.
Dibble Regen	Regeneration of degraded areas, Research Lab, Dibble Immersive Base and, after Phase 4, expansion into new ecosystems.

SECTION 07

The asset: Native forest — starting with the Amazon

We start with the Amazon, the planet's largest terrestrial carbon bank: the project's first 100,000 hectares will all be located there. After Phase 4, our vision has no borders — Cerrado, Atlantic Forest, Pantanal, Caatinga, Pampa and, beyond Brazil, any global ecosystem that deserves permanently untouched protection.

- Natural isolation: inaccessible to extraction, agriculture or any conventional economic activity
- Irreversibility: destroyed primary forest does not recover on a human timescale
- Dispute-free: rigorous due diligence — no overlap with indigenous territories or third parties
- Free of irregular human presence: a non-negotiable criterion for all acquisitions
- Scarcity: the asset is expected to be supported by the growing scarcity of titled native forest available for permanent protection. The carbon price is a future revenue variable, not the basis on which the backing is valued
- Perpetual protection: once incorporated into the Dibble Reserve, the land will be permanent, perpetual and irrevocable

CARBON STOCK REFERENCE

The areas under the project's management hold an estimated stock of approximately 400 tonnes of CO_2 per hectare, with an annual sequestration flow in the range of 1 to 3 tonnes per hectare. Across 100,000 hectares, this represents a stock in the order of 40 million tonnes of CO_2.

Stock is not issued credit. Converting stock into credit depends entirely on the four steps described in Section 08, and only a fraction of total stock is eligible for issuance under any recognised methodology.

Voluntary market price references for high-integrity forest credits sit between US$12 and US$25 per tonne (2026). Compliance market prices — including EU ETS — are not applicable to voluntary credits and are not used as a basis for projection in this document.

> *DBB's backing is the physical asset. Carbon is an attribute of the land, not the basis of its valuation.*

©2026 Dibble Group — Plante Sua Semente Ltda · dibblecoin.com

SECTION 08

Token architecture and tokenomics

FUNDAMENTAL ISSUANCE PRINCIPLES

- Full 1:1 backing at Phase 4: upon completion of Phase 4, 1,000,000,000 DBB = 100,000 hectares
- Phased release: Market Placement (620,000,000) and the Strategic Reserve (200,000,000) leave the vault only when the corresponding land phase is confirmed on-chain in the LandRegistry. The pre-sale, Founding Guardians, Genesis and Team allocations follow their own contractual schedules
- Single issuance: the total supply of 1,000,000,000 DBB will be issued once at deployment — 985,000,000 locked in the vesting vault and 15,000,000 of listing liquidity held by the treasury multisig. There is no further minting
- Circulation transparency: until Phase 4 is completed, the quantity in circulation may exceed the area already confirmed
- BNB Chain: high speed, low cost, full EVM compatibility

GLOBAL SUPPLY DISTRIBUTION (1,000,000,000 DBB)

ALLOCATION	TOKENS	%	PURPOSE
Market Placement	620,000,000	62%	Progressive market placement, released to the treasury in blocks proportional to each land phase, only upon its confirmation in the on-chain LandRegistry
Public pre-sale	15,000,000	1.5%	Five rounds of 3,000,000 DBB · US$0.05 to US$0.35 · delivered 20% at listing and 20% every 30 days thereafter
Founding Guardians (OTC)	30,000,000	3%	Private OTC program · US$600k cap · max. 30M tokens, delivered across phases P1–P4 · carved from the 150,000,000 Team, Ecosystem and Genesis Contributors bucket
Strategic Reserve	200,000,000	20%	Contract-continuity mechanism — will substitute early-exit staking positions once the staking contract is live. Released in Phases 2, 3 and 4
Team, Ecosystem and Genesis Contributors	120,000,000	12%	Executive team, strategic partnerships and Genesis Contributors (remainder of the 150,000,000 bucket after the Founding Guardians allocation). Team: 12-month cliff after listing, then linear release over 24 months, with nothing released before the first Genesis Contributors tranche
Listing liquidity	15,000,000	1.5%	Liquidity provisioning for the CEX listing, held by the treasury multisig outside the vesting vault
Total	**1,000,000,000**	**100%**	**= 100,000 hectares of preserved native forest upon completion of Phase 4**

The Founding Guardians allocation is not additive: the original 150,000,000-token "Team, Ecosystem and Genesis Contributors" category is presented above as 120,000,000 + 30,000,000. All figures will be enforced as absolute constants in the smart contracts and sum to exactly 1,000,000,000.

SUPPLY RELEASE — PRE-SALE AND PROGRESSIVE PLACEMENT

The public pre-sale distributes 15,000,000 DBB across five rounds of 3,000,000. Together with the balance of the Founding Guardians round, it funds Phase 2 — the 20,000 hectares already identified and reserved.

Market Placement (620,000,000 DBB) is released in blocks proportional to the land of each phase: 18,600,000 in Phase 1, 124,000,000 in Phase 2, 186,000,000 in Phase 3 and 291,400,000 in Phase 4. The Strategic Reserve is released in Phases 2, 3 and 4 (41,237,113 / 61,855,670 / 96,907,217) and does not participate in Phase 1. None of these blocks can leave the vault before the corresponding phase is confirmed — including by the Dibble Group itself. This will be enforced by the contract and verifiable on-chain.

Any unsold portion of the pre-sale and of the Founding Guardians round, and any remainder of the 120,000,000 Team and Genesis cap, stays in the vault within Market Placement and is released together with Phase 4.

©2026 Dibble Group — Plante Sua Semente Ltda · dibblecoin.com

LAND PHASE	AREA	BACKING (M²)	MARKET PLACEMENT	STRATEGIC RESERVE
Phase 1	3,000 ha	30,000,000	18,600,000	0
Phase 2	+20,000 ha	+200,000,000	124,000,000	41,237,113
Phase 3	+30,000 ha	+300,000,000	186,000,000	61,855,670
Phase 4	+47,000 ha	+470,000,000	291,400,000	96,907,217
Total	**100,000 ha**	**1,000,000,000**	**620,000,000**	**200,000,000**

Full backing arrives with Phase 4: 1 billion DBB, 100 thousand hectares.

PHASE 1 RELEASE · 3,000 HA · 30,000,000 M² OF BACKING

CATEGORY	TOKENS	RULE
Market Placement	18,600,000	Released to the treasury upon confirmation of Phase 1
Founding Guardians (first tranche, 10%)	up to 3,000,000	Only after 15 months from the OTC close and once at least 25% of the phase's Market Placement tokens have been sold
Genesis Contributors (Base)	~ 4,130,000	30 days after the close of the pre-sale; the exact figure is fixed at the vault load
Strategic Reserve	0	Does not participate in Phase 1
Outside the phases: public pre-sale	15,000,000	Delivered from listing
Outside the phases: listing liquidity	15,000,000	Treasury multisig

The Founding Guardians round first settles the 4th and final installment of the 3,000 ha Foundation, before the opening of the public pre-sale; the balance funds implementation, the start of certification and the down payment on the second area. Details in the “Founding Guardians” section.

THE 5 PRE-SALE ROUNDS

ROUND	TOKENS	PRICE / TOKEN	USE OF PROCEEDS
Round 1	3,000,000	US$0.05	Start of acquisition of the 20,000 reserved ha + georeferencing and on-chain registration
Round 2	3,000,000	US$0.10	Continued acquisition of the 20,000 ha + hiring of the permanent executive team
Round 3	3,000,000	US$0.15	Expansion of the 20,000 ha + operational scaling
Round 4	3,000,000	US$0.25	Expansion of the 20,000 ha + formal start of double certification Verra VCS + Gold Standard
Round 5	3,000,000	US$0.35	Completion of the 20,000 ha + funding of the certification process + definition of the definitive legal structure
Total	**15,000,000**	**—**	**Confirmation of the 20,000 ha in the LandRegistry releases 124,000,000 DBB of Market Placement and 41,237,113 of the Strategic Reserve**

CERTIFICATION COMMITMENT — SIMULTANEOUS DOUBLE STANDARD

The Dibble Group commits to initiating the simultaneous double certification process — Verra VCS and Gold Standard — starting at Round 4. No Brazilian national certifier will be used. The additional cost is deliberate and strategic: it will position future DBB credits at the absolute top of the global quality hierarchy. This commitment is permanent and not subject to revision.

Honesty regarding additionality. The issuance of carbon credits depends on the demonstration of additionality and an accepted baseline under the certifier's methodology (Verra VCS / Gold Standard) — it is neither automatic nor guaranteed. That is precisely why we pursue independent double certification: it is what validates additionality in an auditable way before the market. More importantly: regardless of the volume of credits effectively issued, DBB's backing is the physical asset — the land, whose value does not depend on carbon certification.

©2026 Dibble Group — Plante Sua Semente Ltda · dibblecoin.com

CARBON CREDIT ELIGIBILITY — CURRENT STATUS AND PATH TO ISSUANCE

The areas under the project's management possess characteristics that make them eligible for the future generation of carbon credits: native forest cover, legal protection of permanence and continuous monitoring by remote sensing.

Eligibility is not issuance. No carbon credit exists until all of the following steps are completed:

1. Methodology definition — selection and application of a recognized quantification methodology compatible with the area's profile;
2. Project validation — independent assessment of the project design against the chosen methodology;
3. Third-party verification — independent, periodic auditing of the carbon results effectively measured;
4. Registry issuance — registration of the verified credits in a public registry, at which point the credit comes into existence as an asset.

Until these steps are completed, every reference to carbon credits in this document describes potential, not an existing asset. Any revenue associated with credits is a projection conditional on the full completion of this process, without guarantee of realization, and constitutes an attribute of the land under the project's management — not a right or yield attached to the DBB token.

AREA REGISTRATION AND DISCLOSURE POLICY

Each confirmed land phase is recorded on-chain in the LandRegistry, with the confirmation date and the hash of the phase documentation, which anyone can check against the published document. The perimeter of the total area will be published according to the registration of each phase and the contractual release. The individual coordinate of each square meter will be implemented at a future stage.

BIODIVERSITY CO-BENEFITS — PREMIUM LABELS

The carbon credits that Dibble Reserve lands are eligible to generate will be born with biodiversity co-benefits, to be verified in real time by the Dibble Intelligence Layer — bioacoustics, remote sensing and autonomous surveillance. This layer of proof is designed to qualify future DBB credits for premium integrity labels (such as CCB and SD VISta, by Verra), which have historically commanded higher prices in the voluntary market. The issuance of biodiversity credits as an independent asset will only be evaluated when international standards are consolidated. Until then, we do not promise a product the market has not yet standardized. We measure, we record and we prove. Time certifies the rest.

LISTING POLICY

The Dibble Group will not create or fund a liquidity pool on decentralized exchanges (DEX) during the project's maturation period — a decision that protects price formation from the artificial dynamics of liquidity pools. Listing on a centralized exchange (CEX) will occur only once the project meets the established criteria: audited backing and contracts, and certification underway. Market entry will be conducted with adequate liquidity infrastructure and a professional liquidity provider, in order to sustain book depth consistent with a long-term asset. DBB does not seek early listing.

SECTION 09

Founding Guardians — pre-listing fundraising

PRE-LISTING FUNDRAISING · OPEN REGISTRATION · VERIFIED PARTICIPATION

The Founding Guardians Program is Dibblecoin's pre-listing fundraising stage, open to those who register before the public pre-sale begins. The window opens 30 days before the public pre-sale and closes automatically upon reaching the US$600,000 cap or at the end of the 30 days — whichever comes first. The public pre-sale only opens after the Founding Guardians window closes. There is no extension and no reopening. If fundraising closes below the cap, the settlement of the 3,000 ha Foundation is fully covered by

the founder's own capital, and the public pre-sale opens on schedule — the OTC accelerates the project; it never conditions it.

Use of proceeds: the proceeds of the round first settle the 4th and final installment of the initial 3,000 ha — completing the Foundation phase before the opening of the public pre-sale. The balance funds implementation, the start of the certification process and the down payment on the second area.

Access. The four tickets are published on the official sale page: Platinum (US$600,000 · 30,000,000 DBB · US$0.020), Gold (US$300,000 · 12,000,000 DBB · US$0.025), Silver (US$150,000 · 5,000,000 DBB · US$0.030) and Bronze (US$87,500 · 2,500,000 DBB · US$0.035). Registration is the single entry point, and the same terms apply to everyone. Identity verification (KYC) must be completed before the first purchase: the approved wallet is added to the on-chain whitelist, and the Guardians tier, required for the Founding Guardians round, can only buy 72 hours after approval. No non-disclosure agreement is required at any stage. Payment methods are described in Section 10.

Delivery and anti-dump. Tokens are delivered in 4 phases (10% / 20% / 30% / 40%), each upon confirmation of the corresponding land phase and the sale of at least 25% of that phase's Market Placement tokens, as recorded on-chain in the LandRegistry (Phase 1 counts pre-sale purchases plus the market placements recorded by the treasury multisig; Phases 2 to 4 count the market placements recorded by the treasury multisig). Anti-dump: a 15-month lock-up enforced by the smart contract — no tranche is released before 15 months from the closing of the round, even with land phases confirmed.

Cap and allocation. The round cap is US$600,000: fundraising closes automatically upon reaching this value, on a first-come, first-served basis. The OTC allocation is up to 30,000,000 DBB; the quantity effectively issued depends on the tier mix. Any portion of the 30,000,000 DBB not sold through the OTC remains in the vault within Market Placement and is released together with Phase 4.

SECTION 10

Buyer guarantees and payment methods

GUARANTEES TO BUYERS IN THE OTC AND PRE-SALE PHASES

1. Rights recorded in the smart contract: price, quantity, delivery schedule, the 15-month Founding Guardians lock-up and vesting will be recorded on-chain at purchase. No future restructuring can change them.
2. Succession: any future entity fully assumes the obligations undertaken towards OTC and pre-sale buyers. This clause is also included in the Terms of Use.
3. Same treatment for fiat and crypto: same token, same conditions and same schedule, whatever the payment method. Every purchase will be recorded on-chain.
4. Declared use of proceeds: according to the table of the 5 pre-sale rounds and the declared use of the Founding Guardians round. Multi-signature treasury, public addresses and periodic reporting.
5. Protected land: after the settlement and registration of each phase, the areas will not be sold or pledged as collateral. The registration of a private natural heritage reserve (RPPN) or a perpetual environmental easement is under legal evaluation.
6. Continuity: if the restructuring is delayed or does not occur, the current structure remains valid and all obligations remain in force.
7. Founder's capital: if the Founding Guardians round closes below the cap, the settlement of the Foundation is covered with the founder's own capital, and the pre-sale opens as scheduled.

The guarantee covers delivery, conditions and backing. Never price or return.

©2026 Dibble Group — Plante Sua Semente Ltda · dibblecoin.com

PAYMENT METHODS

- Crypto: BNB or USDT (BEP-20), directly through the sale contract, with immediate transfer to the multi-signature treasury.
- Fiat: not available at launch.
- Identity verification is required for every buyer, in three tiers: Express (up to US$1,000 per wallet, no waiting period), Standard (up to US$50,000 per wallet, first purchase 24 hours after approval) and Guardians (no limit, first purchase 72 hours after approval; required for the Founding Guardians round). The minimum pre-sale purchase is US$20.

SECTION 11

Genesis Contributors — recognition

RECOGNITION PROGRAM · FOUNDING CONTRIBUTORS · INTERNAL PROGRAM

Formal recognition of the people who built Dibblecoin before any public sale. It is not a sales program. It is a commitment that will be recorded on-chain at the vesting vault load.

Some contributors made financial contributions before any public sale, under individual agreements that may include the return of the contribution after listing and a recognition bonus in Phase 4, capped at 15% of the net revenue from that phase's public sales.

Allocation: drawn from the 120,000,000 Team, Ecosystem and Genesis Contributors bucket (the original 150,000,000 less the 30,000,000 of the Founding Guardians round). Distribution across four phases in a 1:2:3:5 proportion: the Base (Phase 1) 30 days after the close of the pre-sale, on the same terms for all; Phases 2, 3 and 4 upon confirmation of the phase and once at least 50% of that phase's Market Placement tokens have been sold, as recorded on-chain in the LandRegistry. The total per contributor corresponds to the base multiplied by 11. Some agreements follow a 2:3:5 proportion, without Phase 1.

REFERENCE PROFILES — EACH AGREEMENT SETS ITS OWN BASE

PROFILE	CONTRIBUTION PROFILE	BASE (P1)	TOTAL (4 PHASES)
Visionary	Decisive strategic vision since the start of the project	200,000	2,200,000
Pillar	Structural contribution: land, legal, financial	100,000	1,100,000
Builder	Sustained technical or operational work	50,000	550,000
Supporter	Support, contacts and assistance throughout the project	25,000	275,000
Seed	One-time contribution at the start of the project	12,500	137,500

©2026 Dibble Group — Plante Sua Semente Ltda · dibblecoin.com

SECTION 12

Guardian Node system and Dibble Wallet App

The Guardian Node will be the central value-capture mechanism of the DBB ecosystem. Holders who stake their tokens will become Forest Guardians — direct participants in the revenue generated by corporate carbon credit leasing, when and if there are active contracts, managed by the Dibble Wallet App. Staking, voting and the Dibble Wallet App depend on a future contract, to be deployed and audited.

> *Activation of the corporate leasing participation system is expected from Phase 3 onward, after certification and the first corporate contract, with no promised date. There will be no early distribution before full compliance with the established conditions. Any distribution is projected and conditional on effective leasing contracting — it does not constitute a guarantee of return.*

DIBBLE WALLET APP — TWO SIDES OF THE SAME ECOSYSTEM

The Dibble Wallet App will be the central interface of the DBB ecosystem — a wallet with two distinct and complementary sides, managed by blockchain smart contracts.

Side 1 — DBB holder: the holder will be able to deposit DBB tokens and become a Forest Guardian. Only the depositing wallet will be able to redeem tokens and receive distributions — immutable by code, without exception, not even by the Dibble Group itself. Staking projects a share of up to 70% of net leasing revenue, conditional on effective corporate contracting, distributed quarterly or in advance according to the chosen model.

Side 2 — CO_2 credit lessee: companies and individuals wishing to offset their carbon footprint will be able to contract the leasing of certified credits with the responsible entity. Each contract will be recorded on-chain, and the leasing certificate will be generated automatically, ready for audits and ESG reports.

100% NON-CUSTODIAL STAKING

- Only the wallet that deposited the tokens will be able to redeem them and receive distributions
- No entity — including the Dibble Group itself — will have access to the holder's tokens or earnings
- “Not your keys, not your coins” — applied in every line of the staking contract
- Staking contract to be audited by recognized independent firms before it goes live
- Holders with actively staked tokens will have governance voting rights — proportional to their staking position

TWO PAYOUT MODELS — THE HOLDER'S CHOICE

Model A — advance payout: the holder may receive in advance part of the value of an active leasing contract (10, 20 or 30 years). Example: for a 20-year contract, the holder requests 10 years in advance, receives immediately, and the tokens are automatically locked for the corresponding period. Exit value based on the physical backing in m^2 — not on the token's market price. Available only when there is a linked active leasing contract.

Model B — quarterly payout: quarterly payout proportional to time staked, when and if leasing revenue is realized. The holder may redeem tokens at any time — without penalty. Upon redemption, they immediately receive the accumulated staking days. The 20% Strategic Reserve will exist to substitute the staking position of a holder who wishes to exit before the end of their leasing contract term — assuming the position so that the active corporate contract remains intact, within the Reserve's available capacity.

©2026 Dibble Group — Plante Sua Semente Ltda · dibblecoin.com

REVENUE DISTRIBUTION MODEL

ALLOCATION	PERCENTAGE
Guardian Nodes (actively staking holders)	projected share up to 70%
Reinvestment in forest expansion (Dibble Reserve)	20%
Operations, compliance and audit (Dibble Group)	10%

The percentages represent the ceiling of each destination over net leasing revenue effectively realized. Any portion not distributed to Guardian Nodes in a given period is allocated in full to reinvestment in forest expansion (Dibble Reserve), with no additional retention by the Dibble Group. They are projections conditional on leasing performance and do not constitute a guarantee of return.

SECTION 13

Execution roadmap

The project operates with two parallel structures: the Pre-Sale Rounds (financial mechanism) and the Land Acquisition Phases (operational commitment). Round proceeds fund the Phases, and confirmation of each Phase in the LandRegistry releases the corresponding Market Placement and Strategic Reserve blocks.

PHASE 1 — FOUNDATION · 3,000 HA / 30,000,000 M²

- 3,000 hectares of native forest in the Amazon — acquisition in progress; 3 of 4 installments paid
- The Founding Guardians round settles the 4th and final installment — Foundation completed before the opening of the public pre-sale
- Georeferencing, land registration and independent third-party audit
- Deployment of the satellite monitoring system and the Dibble Intelligence Layer
- Audited smart contracts + official launch on the BNB Chain
- Confirmation releases 18,600,000 DBB of Market Placement

Total: 3,000 ha · 30,000,000 m^2 of backing

PHASE 2 — IMMEDIATE EXPANSION · +20,000 HA / +200,000,000 M²

- Acquisition of 20,000 additional hectares already identified and reserved, funded by the five pre-sale rounds and the balance of the Founding Guardians round
- Hiring of the permanent executive team between Rounds 2 and 4
- Formal start of the double certification process Verra VCS + Gold Standard (Round 4)
- Definition of the definitive legal structure — within 15 months after the close of the pre-sale
- Confirmation releases 124,000,000 DBB of Market Placement and 41,237,113 of the Strategic Reserve

Cumulative total: 23,000 ha · 230,000,000 m^2 of backing

PHASE 3 — CONSOLIDATION AT SCALE · +30,000 HA / +300,000,000 M²

- Acquisition and legal encumbrance of 30,000 additional hectares
- Activation of corporate carbon credit leasing with Net-Zero corporations
- First conditional distribution of leasing participation to Guardian Nodes
- Environmental and financial impact reports in the GRI standard — semiannually
- Confirmation releases 186,000,000 DBB of Market Placement and 61,855,670 of the Strategic Reserve

Cumulative total: 53,000 ha · 530,000,000 m^2 of backing

©2026 Dibble Group — Plante Sua Semente Ltda · dibblecoin.com

PHASE 4 — LEGACY · +47,000 HA / +470,000,000 M²

- Acquisition of the final 47,000 hectares — completing 100,000 ha in the Amazon
- Full inauguration of the Dibble Operational Core — tower, Starlink, drones, hotel and laboratory
- Launch of the Dibble Immersive Corridor — global real-time VR experience
- Inauguration of the Dibble Research Lab with global university partnerships
- Confirmation releases 291,400,000 DBB of Market Placement and 96,907,217 of the Strategic Reserve

Final total: 100,000 ha in the Amazon · 1,000,000,000 DBB — full 1:1 backing

AFTER PHASE 4 — VISION

- Expansion into other biomes and ecosystems in Brazil and worldwide

SECTION 14

Dibble Intelligence Layer — monitoring, AI and traceability

This section documents the intelligence infrastructure that will transform physical forest data into permanent, verifiable on-chain proof — differentiating DBB from any other existing carbon instrument. This same infrastructure is the proof base for the biodiversity co-benefits intended to qualify future DBB credits for premium labels (CCB / SD VISta).

ACOUSTIC AND SENSOR MONITORING

Sensors installed in the forest canopy will capture sound frequencies imperceptible to the human ear, identifying interspecies communication patterns, signs of water and thermal stress, and any unauthorized human activity — including the sound of chainsaws kilometers away. Neural networks will process this data in real time, generating immediate alerts and automatic blockchain records.

EDGE COMPUTING IN REMOTE ENVIRONMENTS

To operate in naturally isolated areas, the system will use edge computing: data processing will occur on the sensor itself, inside the forest, transmitting only critical information via satellite. This eliminates dependence on conventional connectivity.

DATA CHAIN OF CUSTODY — REAL TIME

Sensor collection, AI processing, smart contract and registration on the BNB Chain — all in real time, with no manipulation window and no human intermediary. The physical reality of the forest will be registered on-chain the moment it happens.

SECURITY POLICY — ZERO TOLERANCE

Autonomous drones will conduct periodic sweeps of all Dibble Reserve areas, integrated with the satellite system. Any unauthorized intrusion will generate an immediate alert and activation of a security protocol. The Dibble Group will adopt a zero-tolerance policy for any irregular presence on its lands.

MARKET PROBLEM	DIBBLE SOLUTION
“How to prove the forest is intact today?”	Real-time on-chain data, to be auditable by any holder
“How to secure remote areas?”	Drones + satellite + zero tolerance — permanent surveillance
“How to obtain independent validation?”	Open science — global universities will publish with Dibble data
“Who owns the data generated by the forest?”	Dibble Group — intellectual property with a georeferenced seal

SECTION 15

Dibble Data Protocol — sovereignty and open science

All data generated by monitoring Dibble Reserve lands will be the exclusive property of the Dibble Group, georeferenced with a proprietary seal and made freely available to global science — with rights fully preserved.

IMMEDIATE ON-CHAIN REGISTRATION

All collected data — forest cover, biodiversity, acoustic patterns, fauna movement, soil quality and climate events — will be recorded on the BNB Chain as soon as it is collected. The record will be open, auditable by any party, and immutable.

OPEN SCIENCE — FREE ACCESS, PRESERVED RIGHTS

Biodiversity data will be made freely available to schools, universities and research centers globally. The Dibble Group will not charge for access. Each academic paper published with Dibblecoin data will represent an independent scientific validation that no direct marketing investment can replicate.

DATA TYPE	PUBLIC ACCESS	RESTRICTED ACCESS
Forest cover and CO_2	Yes — controlled resolution	—
Biodiversity and fauna	Yes — aggregated data	Exact location (NDA required)
Coordinates of registered areas	Perimeter of the total area, according to the registration of each phase and the contractual release	Individual coordinate — future stage
Immutable on-chain record	Yes — public blockchain	—
Weather and soil data	Yes — complete	—

SECTION 16

Dibble Operational Core — base infrastructure

The Dibble Operational Core will concentrate all the project's physical infrastructure at a single point — deliberately occupying less than 1% of the legally permitted use, so that every other area of the Dibble Reserve remains entirely untouched primary forest.

THE MATHEMATICS OF PRESERVATION

LEGAL RIGHT	DIBBLE USE	UNTOUCHED FOREST
In the Legal Amazon, Brazilian law permits the use of up to 20% of each area, preserving 80% as Legal Reserve. Percentages vary by biome; the Dibble Group applies the most restrictive criterion applicable to each area	Less than 1% of that right — concentrated in a single operational core	All other areas of the Dibble Reserve remain entirely untouched

©2026 Dibble Group — Plante Sua Semente Ltda · dibblecoin.com

OPERATIONAL CORE COMPONENTS

STRUCTURE	PLANNED FUNCTION
Scientific Observation Tower	Canopy monitoring, atmospheric sensors, full weather station and continuous local CO_2 measurement. Anchor of the Starlink system. Will operate as a continuous certification instrument.
High-Speed Starlink	High-capacity connectivity installed on the tower — enables real-time VR streaming, immediate on-chain transmission and full operation of the Dibble Intelligence Layer.
Drone Operations Corridor	Area for operating the most compact and silent drones available. Routes defined by biologists specialized in Amazonian fauna — controlled schedules and minimal ecosystem impact.
Rustic Hotel	Accommodation for staking DBB holders, scientific partners and OTC investors. An authentic forest immersion experience — with no pretension of luxury.
Dibble Research Lab	Operational base for scientific research on fauna, flora and medicinal plants. Partnerships with national and international universities and research institutes.

SECTION 17

Dibble Immersive — base and virtual corridor

DIBBLE IMMERSIVE BASE — THE FOREST AS AN IN-PERSON EXPERIENCE

A rustic and authentic accommodation structure, to be built inside the preserved forest, with no pretension of luxury. The goal will be total immersion in the natural ecosystem in its purest state, participation in the reserve's daily activities, and direct contact with the protected asset.

- Free for holders with a minimum of 10,000 DBB in active staking, once the staking contract is live — the equivalent of one hectare of protected forest — and their immediate family
- Scheduling is handled on a first-request basis and limited to the physical capacity of the base
- Transportation to the base at each visitor's expense — a clear and honest policy
- It is not a resort — it will be authenticity. The forest as it really is
- Available to strategic partners and OTC investors by invitation

DIBBLE IMMERSIVE CORRIDOR — THE FOREST WITHOUT BORDERS

The Dibble Reserve will deploy a network of intelligent corridors within its forests — autonomous drone infrastructure on defined routes, equipped with high-resolution cameras, directional microphones and environmental sensors. High-speed Starlink connectivity will ensure real-time streaming to any point on the planet.

> *A DBB holder in Tokyo will be able to virtually visit the forest they protect. A corporate buyer will be able to show their shareholders the real forest offsetting their emissions. A school will be able to hold a class inside the Amazon without leaving the classroom.*

SECTION 18

Market and opportunity

THE VOLUNTARY CARBON MARKET

The voluntary carbon market is in accelerated consolidation. According to Grand View Research (2025), the market is projected to grow from US$5.3 billion in 2025 to US$52.4 billion by 2033, at a 32.2% CAGR (2026–2033). With Paris Article 6 tending to reduce the acceptance of credits without real backing, projects with verified physical ownership will become scarce and strategic.

CORPORATE DEMAND PROFILE — TARGET BUYERS

The companies below illustrate the demand profile of the Net-Zero market. They have no commercial relationship with the Dibble Group — they represent the type of corporate buyer that DBB credits intend to serve.

COMPANY	SHARE OF CUMULATIVE HISTORICAL EMISSIONS (1965–2017)	NET-ZERO COMMITMENT
Saudi Aramco	4.38%	Net-Zero 2050 target announced in 2021
Microsoft	Largest removal buyer	Carbon-negative by 2030; removal of all historical CO_2 emitted by 2050
ExxonMobil	3.09%	Public commitment to operational Net-Zero by 2050
Chevron	3.20%	Net-Zero 2050 aspiration — upstream Scope 1 and 2 (2021)
Coca-Cola Company	Active credit buyer	Net-Zero 2050 — the demand profile DBB intends to serve

Share of cumulative historical emissions: Climate Accountability Institute, 1965–2017.

SECTION 19

Governance and legal structure

STAGE	ENTITY	FUNCTION
Current (capital raising)	Plante Sua Semente Ltda (Brazil)	Sale of DBB, land, land management, monitoring and forest operations
Current (capital raising)	Multi-signature wallets	Crypto receipts, with public addresses
Definitive (within 15 months)	To be defined with international counsel	Direction: Switzerland, for the certification and commercialization of carbon credits

The definitive structure will be defined within 15 months after the close of the pre-sale, with international legal counsel. Switzerland is the direction, not a closed commitment. Until then — and if the restructuring is delayed or does not occur — the current structure remains valid and all obligations to buyers remain in force.

WHY SWITZERLAND IS THE DIRECTION

- Centuries-old political neutrality and legal stability
- International recognition by global Family Offices and institutional funds
- Double-taxation treaties with more than 100 countries
- Compliance standards equivalent to the best European practices — rigorous FATF, AML/KYC
- Insulation of carbon credit commercialization from local political risk

SECTION 20

Founder and transparency

The Dibble Group is founded and led by Cesar Morais — 100% doxxed, with a publicly verifiable identity and more than 15 years of continuous digital presence on the main global platforms. In a market where anonymity is often used to hide responsibility, the DBB founder does the opposite: he puts his name, his face and his reputation as the project's first guarantee.

SECTION 21

Risk factors and mitigations

The Dibble Group adopts radical transparency regarding the risks inherent to the project. Understanding the risks is the informed participant's first protection.

RISK	DESCRIPTION	STRUCTURAL MITIGATION
Regulatory	Changes in token regulation in key jurisdictions — new laws and standards emerge almost monthly	Definitive structure defined with international counsel + continuous FATF/MiCA alignment + adaptable structure; obligations to buyers preserved by the succession clause
Land tenure	Ownership disputes or unidentified overlaps	Rigorous due diligence + legal encumbrance + independent third-party audit
Market	CO_2 price volatility or contraction of voluntary demand	The backing is the physical asset (land) — independent of the current carbon price
Additionality / Certification	Need to demonstrate additionality and baseline; risk of credit issuance below projections	Independent double certification (Verra VCS + Gold Standard); value anchored in the physical asset, not in credit volume
Technological	Smart contract vulnerabilities or BNB Chain issues	Independent pre-launch audit + treasury held in a multi-signature wallet with distributed keys + critical parameters made immutable at contract deployment
Environmental	Fires or extreme climate events in preserved areas	Dibble Intelligence Layer 24/7 (to be deployed) + contingency plan + geographic diversification after Phase 4

©2026 Dibble Group — Plante Sua Semente Ltda · dibblecoin.com

RISK	DESCRIPTION	STRUCTURAL MITIGATION
Liquidity	Difficulty exiting before listing	Once the staking contract is live, the 20% Strategic Reserve will substitute the staking position of holders who exit before the end of their leasing contract term — preserving active contracts, within its available capacity + two flexible staking models
Time horizon	The return of allocated capital may take years — the carbon market is under active regulatory construction	Explicit long-term legacy positioning; the project is not suitable for those seeking liquidity or rapid capital multiplication
Expropriation	Requisition on national security grounds in any country	Legal encumbrance of the land; after Phase 4, geographic diversification across biomes and jurisdictions
Backing timing	Until Phase 4, the quantity in circulation may exceed the confirmed area	Market Placement and the Strategic Reserve only leave the vault upon phase confirmation; full 1:1 backing at Phase 4
Treasury multisig powers	A 2-of-3 multi-signature wallet whitelists buyers, opens the Founding Guardians round and the pre-sale rounds, sets the listing date, confirms land phases, records each phase's Market Placement sales and can pause withdrawals. These actions affect when tokens are released. The contract also allows it to record purchases paid outside the blockchain, a function not used at launch.	Distributed keys (2-of-3); every action is public on-chain; each phase confirmation carries the hash of the published phase documentation. The multisig cannot mint tokens, take buyers' tokens or change the contract rules.
Implementation	Staking, leasing and the Dibble Wallet App are not yet built	Contracts audited before launch; no distribution before activation

SECTION 22

Long-term thesis

DBB exists at the intersection of three of the greatest macrotrends of the global economy: the climate crisis and the demand for verifiable emissions offsetting; the global movement of real-world asset (RWA) tokenization; and the credibility collapse of carbon projects without physical land ownership.

The result is a singular proposition: an asset whose base is the growing scarcity of preserved forest, with a projected and conditional share of carbon leasing revenue (not guaranteed), which will be auditable in real time by any holder.

FEATURE	DBB	LANDLESS TOKEN	GENERIC TOKEN	FOREST ETF
Audited physical land ownership	In progress	No	No	Indirect
Verifiable 1:1 on-chain backing	Planned	Partial	No	No
Immutable on-chain traceability	Planned	No	Partial	No
Projected leasing share	Projected, conditional	No	No	Yes (income distribution)
Double cert. Verra VCS + Gold Standard	Planned	Optional	No	No
Biodiversity co-benefits (CCB/SD VISta)	Planned	No	No	No
Permanent and irrevocable protection	Planned	No	No	No
Non-custodial staking	Planned	No	Partial	No
Dibble Wallet App — two sides	Planned	No	No	No
Intelligence Layer (AI + drones)	Planned	No	No	No
Immersive Corridor VR	Planned	No	No	No
100% doxxed founder	Yes	Partial	No	Yes

©2026 Dibble Group — Plante Sua Semente Ltda · dibblecoin.com

DBB was not created to make anyone rich. It was created to leave something untouched. What we promise is the forest, standing, forever. What we estimate — and only estimate — is what the future carbon market may do for those who had the patience to preserve it.

SECTION 23

Next steps and contact

Institutional investors, Family Offices, ESG funds and corporations interested in following the project's development may register their interest through the official form available at dibblecoin.com. Registration is the single entry point, and the same terms apply to all participants.
