Searchlight Cyber

Searchlight Exposure

Exposure Management

Your attack surface Deserves more than a daily scan.

Searchlight Exposure delivers continuous, verified attack surface monitoring - scanning hourly, not daily - so you can detect exposures as they emerge. Our platform combines automated discovery, deep enrichment, and proprietary vulnerability research to reduce your window of exposure and help your organization stay ahead of threats.

> *"Easily the best ASM product we've ever used... The Searchlight team is always one step ahead*

Take back the first-mover advantage from attackers

The time between vulnerability exploitation is shrinking. With hourly scanning you can detect exposures early before they're weaponized.

Focus on threats that matter most to your organization

Searchlight automatically detects and prioritizes version-specific exploitable exposures, helping you cut through the noise and respond faster.

Stay ahead of zero-day vulnerabilities

Our security research team constantly uncovers new vulnerabilities, giving you early warnings on zero-days, so you can mitigate them before attackers have the chance to exploit them.

See the full picture with Searchlight's Preemptive Threat Exposure Management platform.

Searchlight Exposure Exposure Management	Searchlight Threat Monitor	Searchlight Threat Investigate
• Hourly scans across your entire environment • Alerts on verified exposures, with POC's for every finding • Zero-day alerts from our research team in product	• Continuous dark web scanning • Get prioritized alerts focused on your specific attack surface • Resolve threats quicker with out MITRE ATT&CK® mapping	• Identify, preserve, and share dark web evidence with ease • Securely access Tor and I2P services with our virtual machine • Set alerts to monitor keywords and actors across the dark web

Outpace attackers targeting your organization with Searchlight Exposure

Continuously map and monitor your attack surface. Get hyper-personalized alerts, without the noise, that help your team mitigate risks faster.

Key Features

Threat actors are exploiting new vulnerabilities faster than ever. Searchlight automatically scans millions of assets from a single seed domain, simulating the tactics of a criminal to ensure you're alerted first when credible threats are discovered.

Continuous Asset Discovery

The only ASM that scans and verifies exposures across your entire attack surface every hour (not daily).

High-Signal Exposure Engine

Get hyper personalized alerts on verified exposures, beyond basic CVEs, complete with POCs for every finding.

Zero-Day Insights

Stay ahead with novel vulnerability alerts fed directly into the platform by our research team.

Proactive IOC Monitoring

Detect signs that your assets may have already been compromised, including network requests to C2 servers, compromised Javascript, and web shell detection.

Build Your Own Checks with Custom Signatures

Run your own security checks, using our powerful exposure engine and IOC capabilities. Develop custom checks for a wide array of scenarios, including HTTP, JavaScript, TPPE, or IOC based-threats.

Integrate with Existing Tools & Workflows

Connect with SIEMs, local MCP servers, and workflow systems, like Jira, as well as cloud services, bug bounty platforms, and SSO systems. For custom solutions, our API and CLI are also available.
