Searchlight Cyber

Searchlight Threat

Investigate

Empowering investigation teams worldwide

Equip your team with Searchlight Threat. Our Investigation module and dataset are used by law enforcement and government agencies to get answers fast when a threat is flagged. Your team gets access to that same data – powerful AI search, a secure Stealth Browser virtual machine, and aggregated attack intelligence – so you know your adversary before they know you.

> *Searchlight is our 'go-to tool' for all investigations. Without Searchlight, we often wouldn't know where to begin.*

Stay ahead of criminals with comprehensive intelligence

Gain instant visibility into what's being shared on the dark web, even content that's been deleted. With over 15 years of archived intelligence gathered from dark web marketplaces, forums, and ransomware leak sites.

Support business-critical investigations

Accelerate investigations from due diligence in acquisitions to executive threat response.
Investigation's powerful search tools help CTI teams quickly identify and report on relevant threats to their business.

Securely investigate the dark web without the red tape

Our ransomware, marketplace, and vendor dashboards empower investigators of all experience levels to go "incognito", quickly identify emerging threats, and directly access the dark web using our in-browser, dark web virtual machine.

See the full picture with Searchlight's Preemptive Threat Exposure Management platform.

Searchlight Exposure Exposure Management	Searchlight Threat Monitor	Searchlight Threat Investigate
• Hourly scans across your entire environment • Alerts on verified exposures, with POC's for every finding • Zero-day alerts from our research team in product	• Continuous dark web scanning • Get prioritized alerts focused on your specific attack surface • Resolve threats quicker with out MITRE ATT&CK® mapping	• Identify, preserve, and share dark web evidence with ease • Securely access Tor and I2P services with our virtual machine • Set alerts to monitor keywords and actors across the dark web

Uncover hidden criminal activity – and act on it with Searchlight Threat

Our platform is used globally to defend organizations, people, and countries. It has been used in some of the biggest cases involving dark web activity and has had a proven impact in bringing perpetrators to justice.

Key Features

Ransomware Group & Market Dashboards

Access pre-aggregated intelligence on the most active markets and vendors – making it easier to focus on local or mission-specific threats.

AI-Powered Research Assistant

Surface insights faster with AI: Query the dark web with natural language to generate reports on threat actors, ransomware groups, and tabulated intelligence directly relevant to your organization.

Automated Actor and Thread Summaries

With a single click, Investigate collects, translates, and compiles summaries of complex threats and actor profiles from forums, marketplaces, and encrypted chat platforms.

Stealth Browser, Dark Web Virtual Machine

Anonymously investigate I2P and Tor directly from the browser, safe in the knowledge that your identity is protected and malware can't jump to your live network.

Case Management and Activity Alert Tools

Easily identify, preserve and share evidence related to criminal operations with simple case management tools and activity alerts for keywords and high-risk threat actors.

Leaked Credential Search

Accelerate investigations and unmask high-risk actors hiding behind online aliases with access to previously hard-to-obtain stolen credential data.
