TLIF Lumbar Interbody

A transforaminal posterior lumbar interbody fusion device intended for use as an aid in spinal fixation. The device is designed for bone in-growth and biological fixation. The TPLIF cage is to be implanted via a transforaminal or posterior approach.

Width x Length	Height*
12x30 mm	8-16 mm
12x36 mm	8-16 mm

Implant Features:

- Large graft windows for bone graft to aid in fusion throughout the interbody cage.
- Ergonomically shaped insertion edges to facilitate cage insertion.
- Thick teeth to prevent unintended implant migration.
- Offered in a range of lengths and heights.
