

Inbound to Manufacturing & Production Logistics

Supply assurance through inbound control and flexible warehousing.

Most disruption does not originate in the plant — it originates upstream.

APL Logistics' inbound automotive warehousing brings together inbound planning, end-to-end visibility, and exception management with close supplier coordination. It uses cross-docking, buffering, and value-added services to support a smooth line-feeding process and maintain production continuity.

In this approach, warehousing helps keep operations flowing, while ensuring a reliable supply remains the top priority. Our inbound Contract Logistics solution offers comprehensive support for both international and domestic supply chains.

Orchestration

Order Planning and Partner Management

Multimodal Transport

Ocean, Air, Rail, FTL, LTL, Milk-runs, and customs clearance

Warehousing & Inventory

Cross-Dock, Bonded Warehouse Consolidation, VMI Hub, FTWZ, and In-Plant Operations

Just-In-Time Solutions

Sequencing, Kitting, JIT delivery, and Line Feeding

Technology

Control Tower, OMS, WMS, and TMS

Key Benefits

Production Continuity

Reduced line stop risk through inbound control

Lower Cost of Disruption

Manage variability vs the lowest activity cost

Inventory Discipline

Right buffers, balanced stocks, resilient and efficient

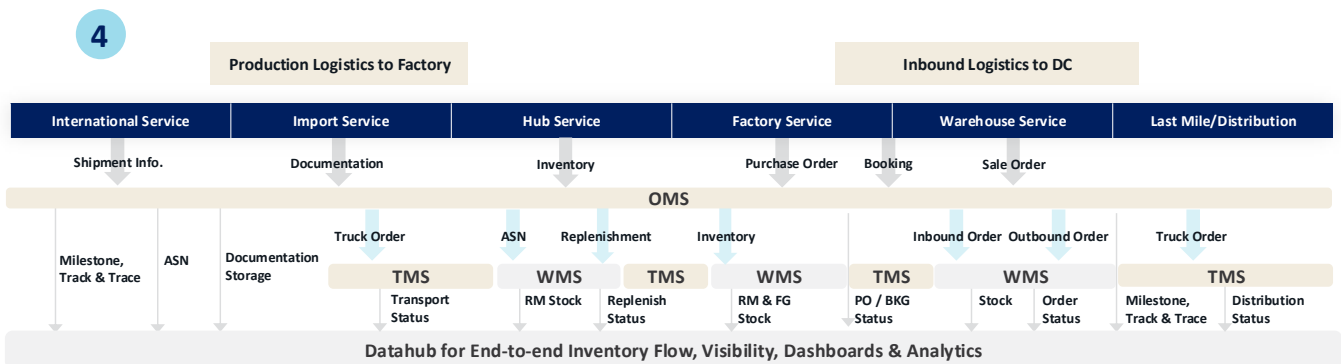

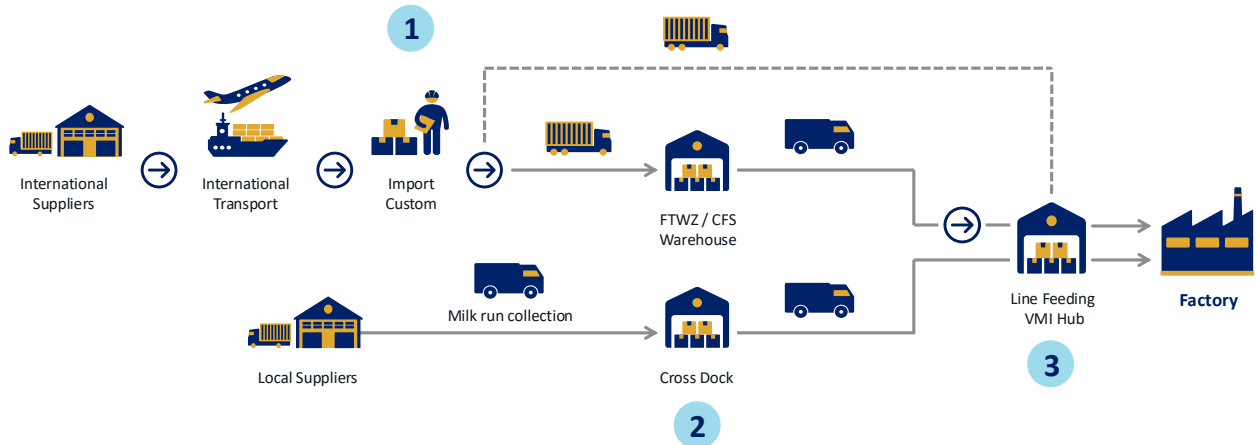

***Protecting production
by controlling inbound
variability.***
