

Deliver Software Quality Continuously

Power your mobile and web apps at scale with the most comprehensive, AI-driven platform solution for software quality.

With Sauce Labs, you can test, release, and innovate confidently—powered by Sauce AI Agents grounded in real data.

Powering the World's Leading Apps

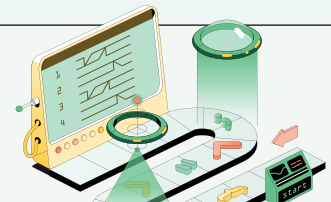

The best brands in the world don't leave quality to chance.
They use Sauce Labs to raise the bar.

We help teams:

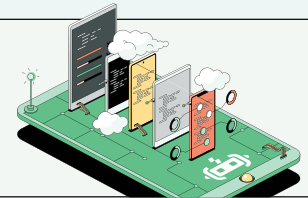

Catch issues earlier
in development

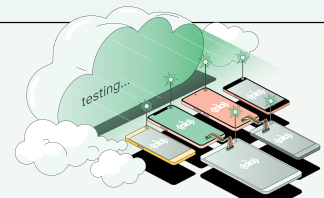

Streamline quality processes
to save time and resources

Improve reliability in production

Consolidate tools, processes, and
data in a unified quality platform

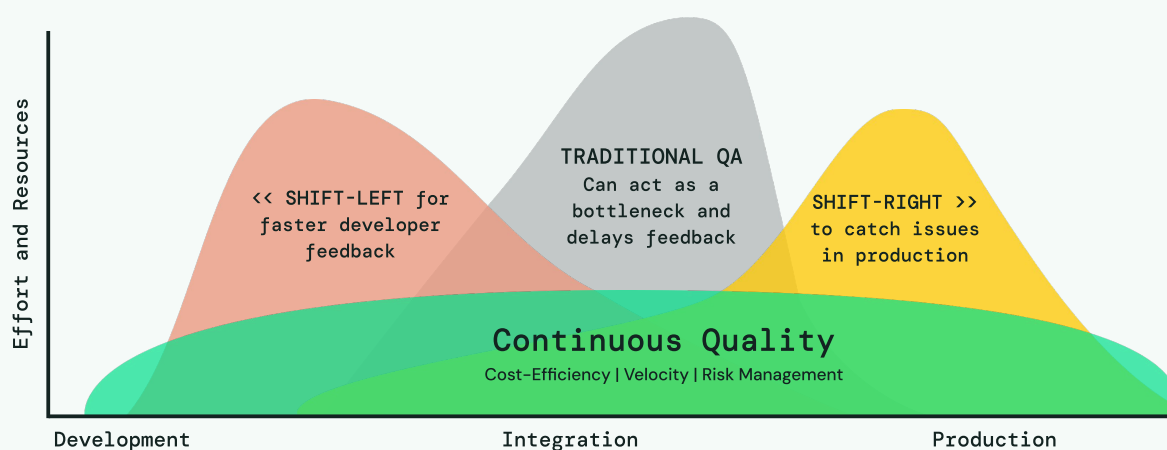

“Sauce Labs has helped us take a massively data-driven approach to quality in our CI/CD pipelines, giving us good DevEx and the confidence to ship faster...Adding Sauce to our CI/CD pipelines has been key for growth and to predictively deliver new functionality to our customers.”

indeed

Continuous Quality: A Competitive Advantage

Sauce Labs champions a Continuous Quality model that integrates quality from the earliest stages of development through post-production. This approach closes the quality gap and transforms testing from a chore into a competitive advantage.

Our unified platform for continuous quality works throughout the full software development lifecycle.

Gartner reports that

“Continuous quality significantly improves an organization’s ability to serve and delight its customers.”

By 2026, Gartner predicts that

70% of software engineering teams will adopt a continuous quality strategy.

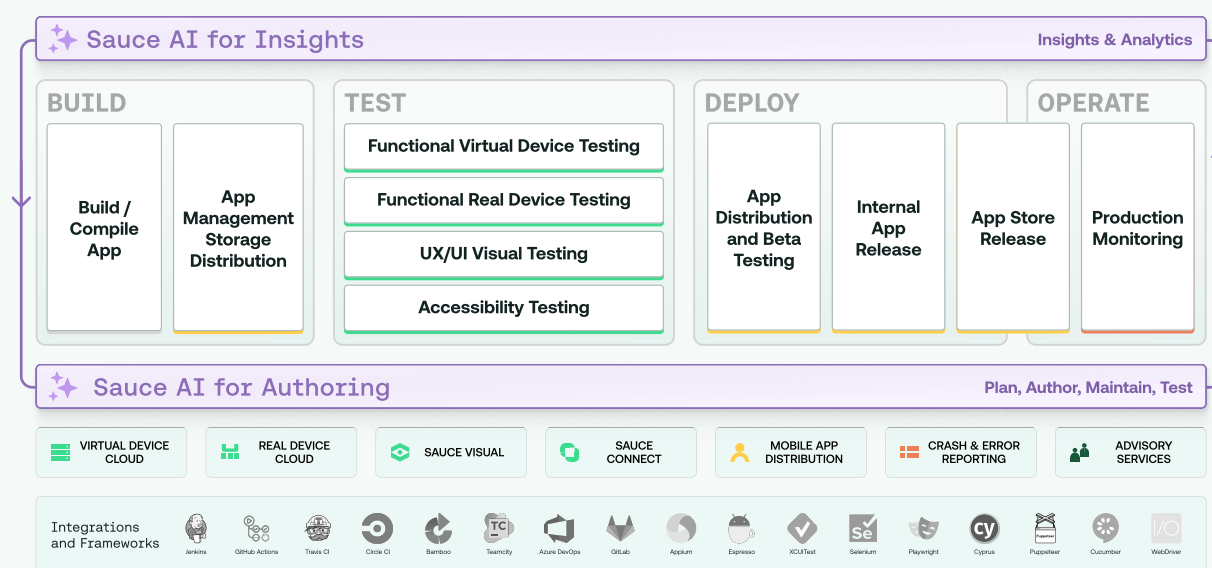

Gartner®

The Sauce Labs Platform

The Sauce Labs Platform for Quality is an extensible, scalable, and secure environment that integrates seamlessly with your development lifecycle. Our platform supports any team, regardless of tech stack, target platforms, or frameworks, and is trusted by leading global enterprises.

Our Sauce AI Agents automate tedious testing work—from test creation to debugging—unifying data from build through production, making insights actionable, and accelerating release cycles.

Quality at Scale & Speed Across the SDLC

AI-Powered Authoring & Data Insights

AI Agents embedded across the SDLC

- AI-powered test data analytics
- Automated test script creation (beta)
- ML-powered Failure Analysis

Virtual Device & Browser Testing at Scale

Scale automated test coverage across browsers & OS

- 800+ of virtual browser/OS combinations
- Widest selection of emulators & simulators
- Scale testing with your framework of choice

Visual Testing

Discover visual regressions using existing tests

- New end-to-end visual regression testing
- Component tests
- Accessibility testing

Real Environment Testing

Deliver seamless mobile experiences

- 9000+ real devices available
- Leading mobile app diagnostics toolkit

Mobile App Distribution & Beta Testing

Distribute beta apps quickly on one platform

- Test mobile apps with real users
- Cross-platform support

Crash & Error Reporting

Application error monitoring and crash reporting

- Cut resolution by up to 50%
- Proactive error detection

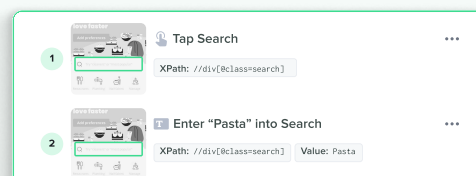

Optimize Testing, Maximize Efficiency

How can I help you today?

SAUCE AI FOR Insights

Generate automated tests from plain English, empowering your entire team to build test coverage faster and release with confidence.

SAUCE AI FOR Test Authoring

Analyze test data effortlessly. Get context-aware answers, visual insights, and faster decisions - all through a simple conversational interface built for every role.

Sauce AI:

Turn quality into a strategic advantage and accelerate innovation at enterprise scale.

Modern software development is more complex than ever. Your engineering teams face significant hurdles that include overwhelming test data analysis, time-consuming and error-prone test creation and maintenance, and the complexity of surfacing critical issues with millions of crash events in production.

Sauce AI provides a clear path out of the chaos. Embedded within the Sauce Labs unified platform, the native-AI Agents perform a variety of advanced functions, from data transformation and predictive intelligence to failure analysis to automated script creation and maintenance.

It's quality intelligence across every stage of the SDLC. Whether you're analyzing test data, authoring automated tests, or triaging errors and debugging, each out-of-the-box AI Agent provides specialized capabilities that help your teams be more productive.

The result is a strategic testing platform that scales with your organization — grounded in data, powered by AI, and designed to help every role, from citizen developer to QA leader, release with confidence. By reducing the load on engineers, Sauce AI helps your teams accelerate release cycles without sacrificing quality.

Take control of your release cycles and cut through the data noise.

The Sauce Labs Promise

Enterprise Ready

Founded by Selenium and Appium creators, we bring unmatched test expertise and top-notch customer support. Join the Sauce Community to receive guidance from world-class experts.

Comprehensive Coverage at Scale

With over 8 billion+ tests run, 1700+ emulators and simulators, support for 9000+ real devices, and 800+ browsers, we provide unrivaled scale and coverage. Run thousands of tests in parallel with your framework of choice.

Secure by Design

We ensure the highest security and data protection standards, with certifications including SOC 3, SOC 2 Type 2, ISO 27001, ISO 27701, FSQS, KY3P, and compliance with GDPR and CCPA. Sauce Connect enables secure app testing in private environments via proxy tunnels and secure data centers.

AI-driven Continuous Quality

Sauce AI accelerates test authoring, automates failure analysis, and delivers real-time, actionable insights tailored to your application's unique needs, empowering your teams to build better software, faster and with confidence.

“Continuous Integration and Continuous Delivery are crucial for any product to provide customer value. Integrating Sauce Labs automated testing into the CI/CD pipeline accomplishes high product quality at every step.”

“Sauce Labs is the one-stop shop for all our software quality needs.”

About Sauce Labs

Sauce Labs is the leading cloud-hosted platform for automated testing of web and mobile applications, enabling fast delivery of high-quality software across the development lifecycle. Founded by the creators of Selenium, Sauce Labs has been the testing leader for over 17 years and now runs over 1 billion tests annually. Trusted by Fortune 500 companies like Toyota, Walmart, Verizon, and Fidelity Investments, its scalable, secure platform supports testing across thousands of operating systems, browsers, and devices while meeting the highest compliance standards.
