

Workflow automation that's more than just a digital mailroom

We apply workflow automation to the front door of your operations, transforming every inbound interaction into structured, actionable data.

Information arrives through many channels, and traditional mailrooms rely on manual sorting, indexing, and routing before work can begin. Our workflow automation applies intelligent intake and orchestration from the start.

Our Foundational Intelligence Engine:

Data validation

Normalization

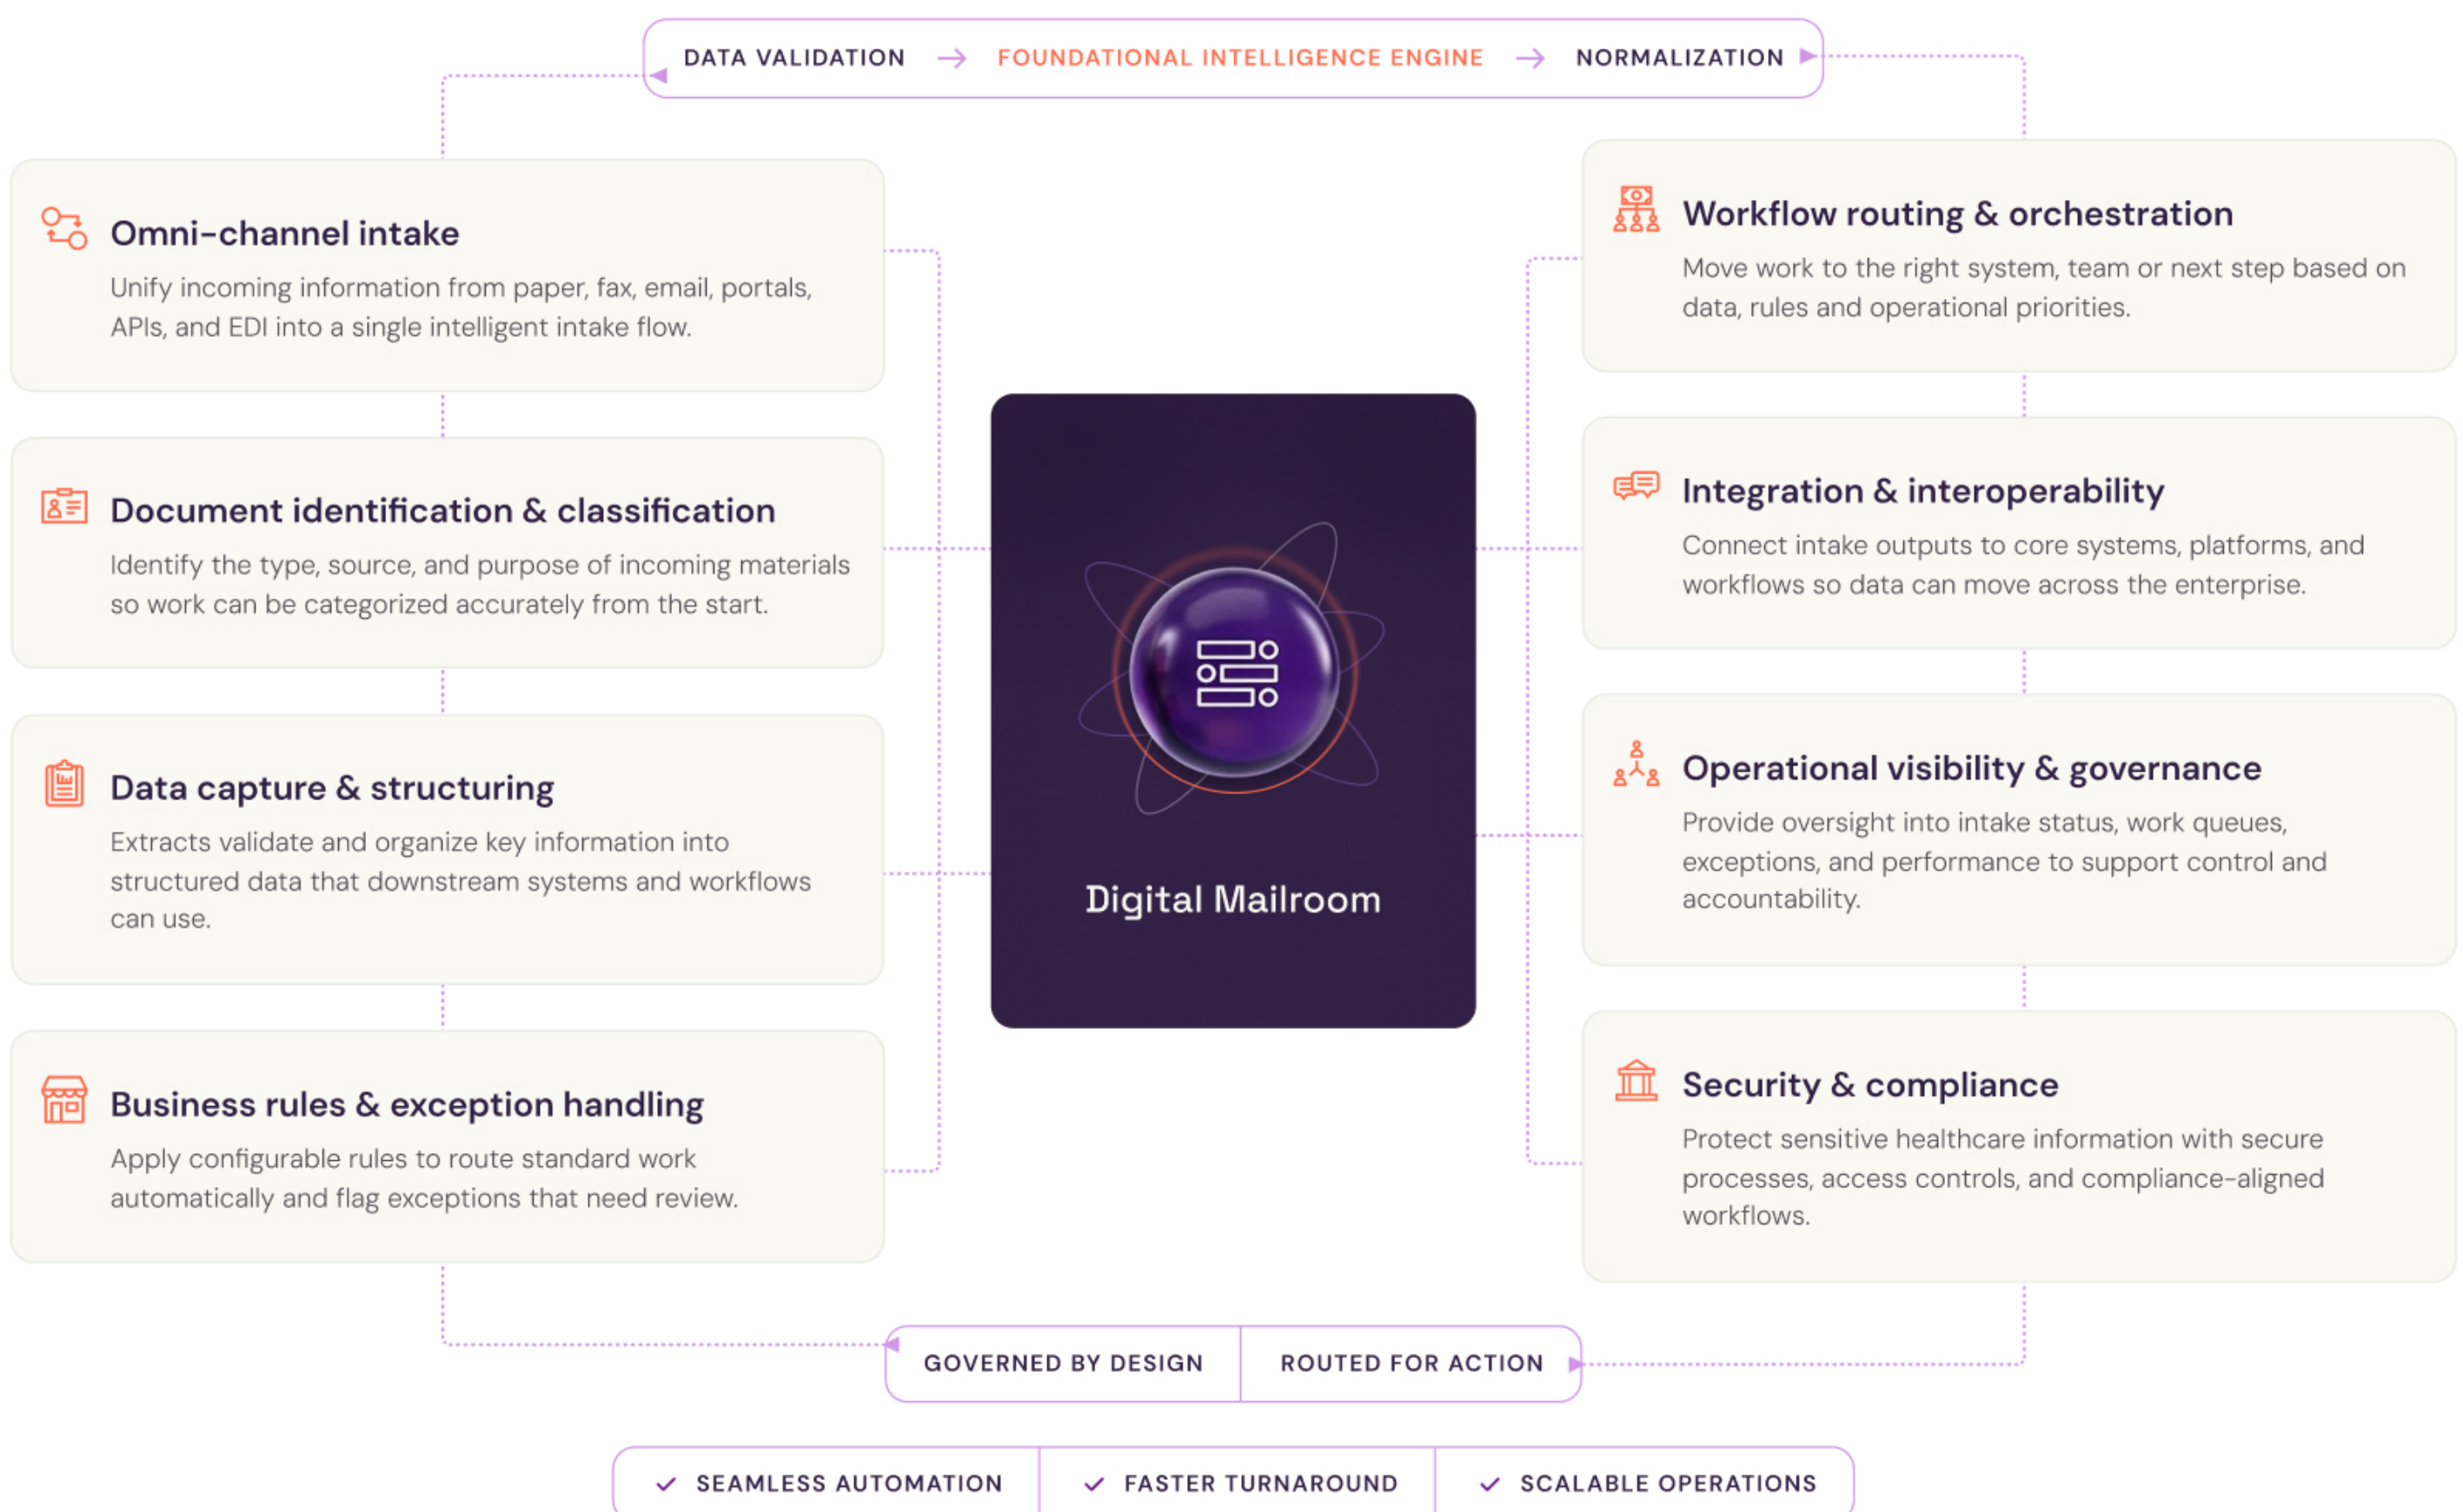

Governance

Routing

Our workflow automation turns intake chaos into structured, automation-ready operational inputs

Powered by the Smart Data Solutions Platform, Digital Mailroom workflow automation ingests information from any source in any format and applies foundational intelligence to identify, validate, classify, and route work before it reaches downstream systems.

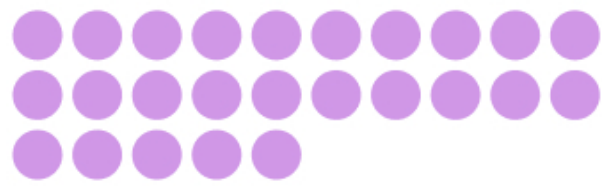

Digital Mailroom by the numbers

Automating over 500 payer mailrooms across the U.S.

10 tons

of mail processed weekly

250k

images scanned per day

1,500+

document sort variations

"Smart Data Solutions performs all of our front-end services. This includes clearinghouse, scanning, imaging, OCR, and mailroom. The process runs smoothly without much interruption."

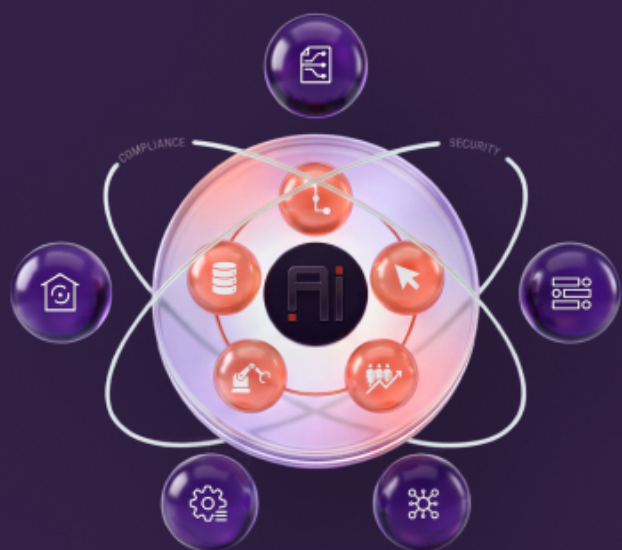

Debbie Ziegler

Executive Director of Operations,
HealthNow Administrative Services
