

Connecting systems is easy. Making healthcare data flow isn't.

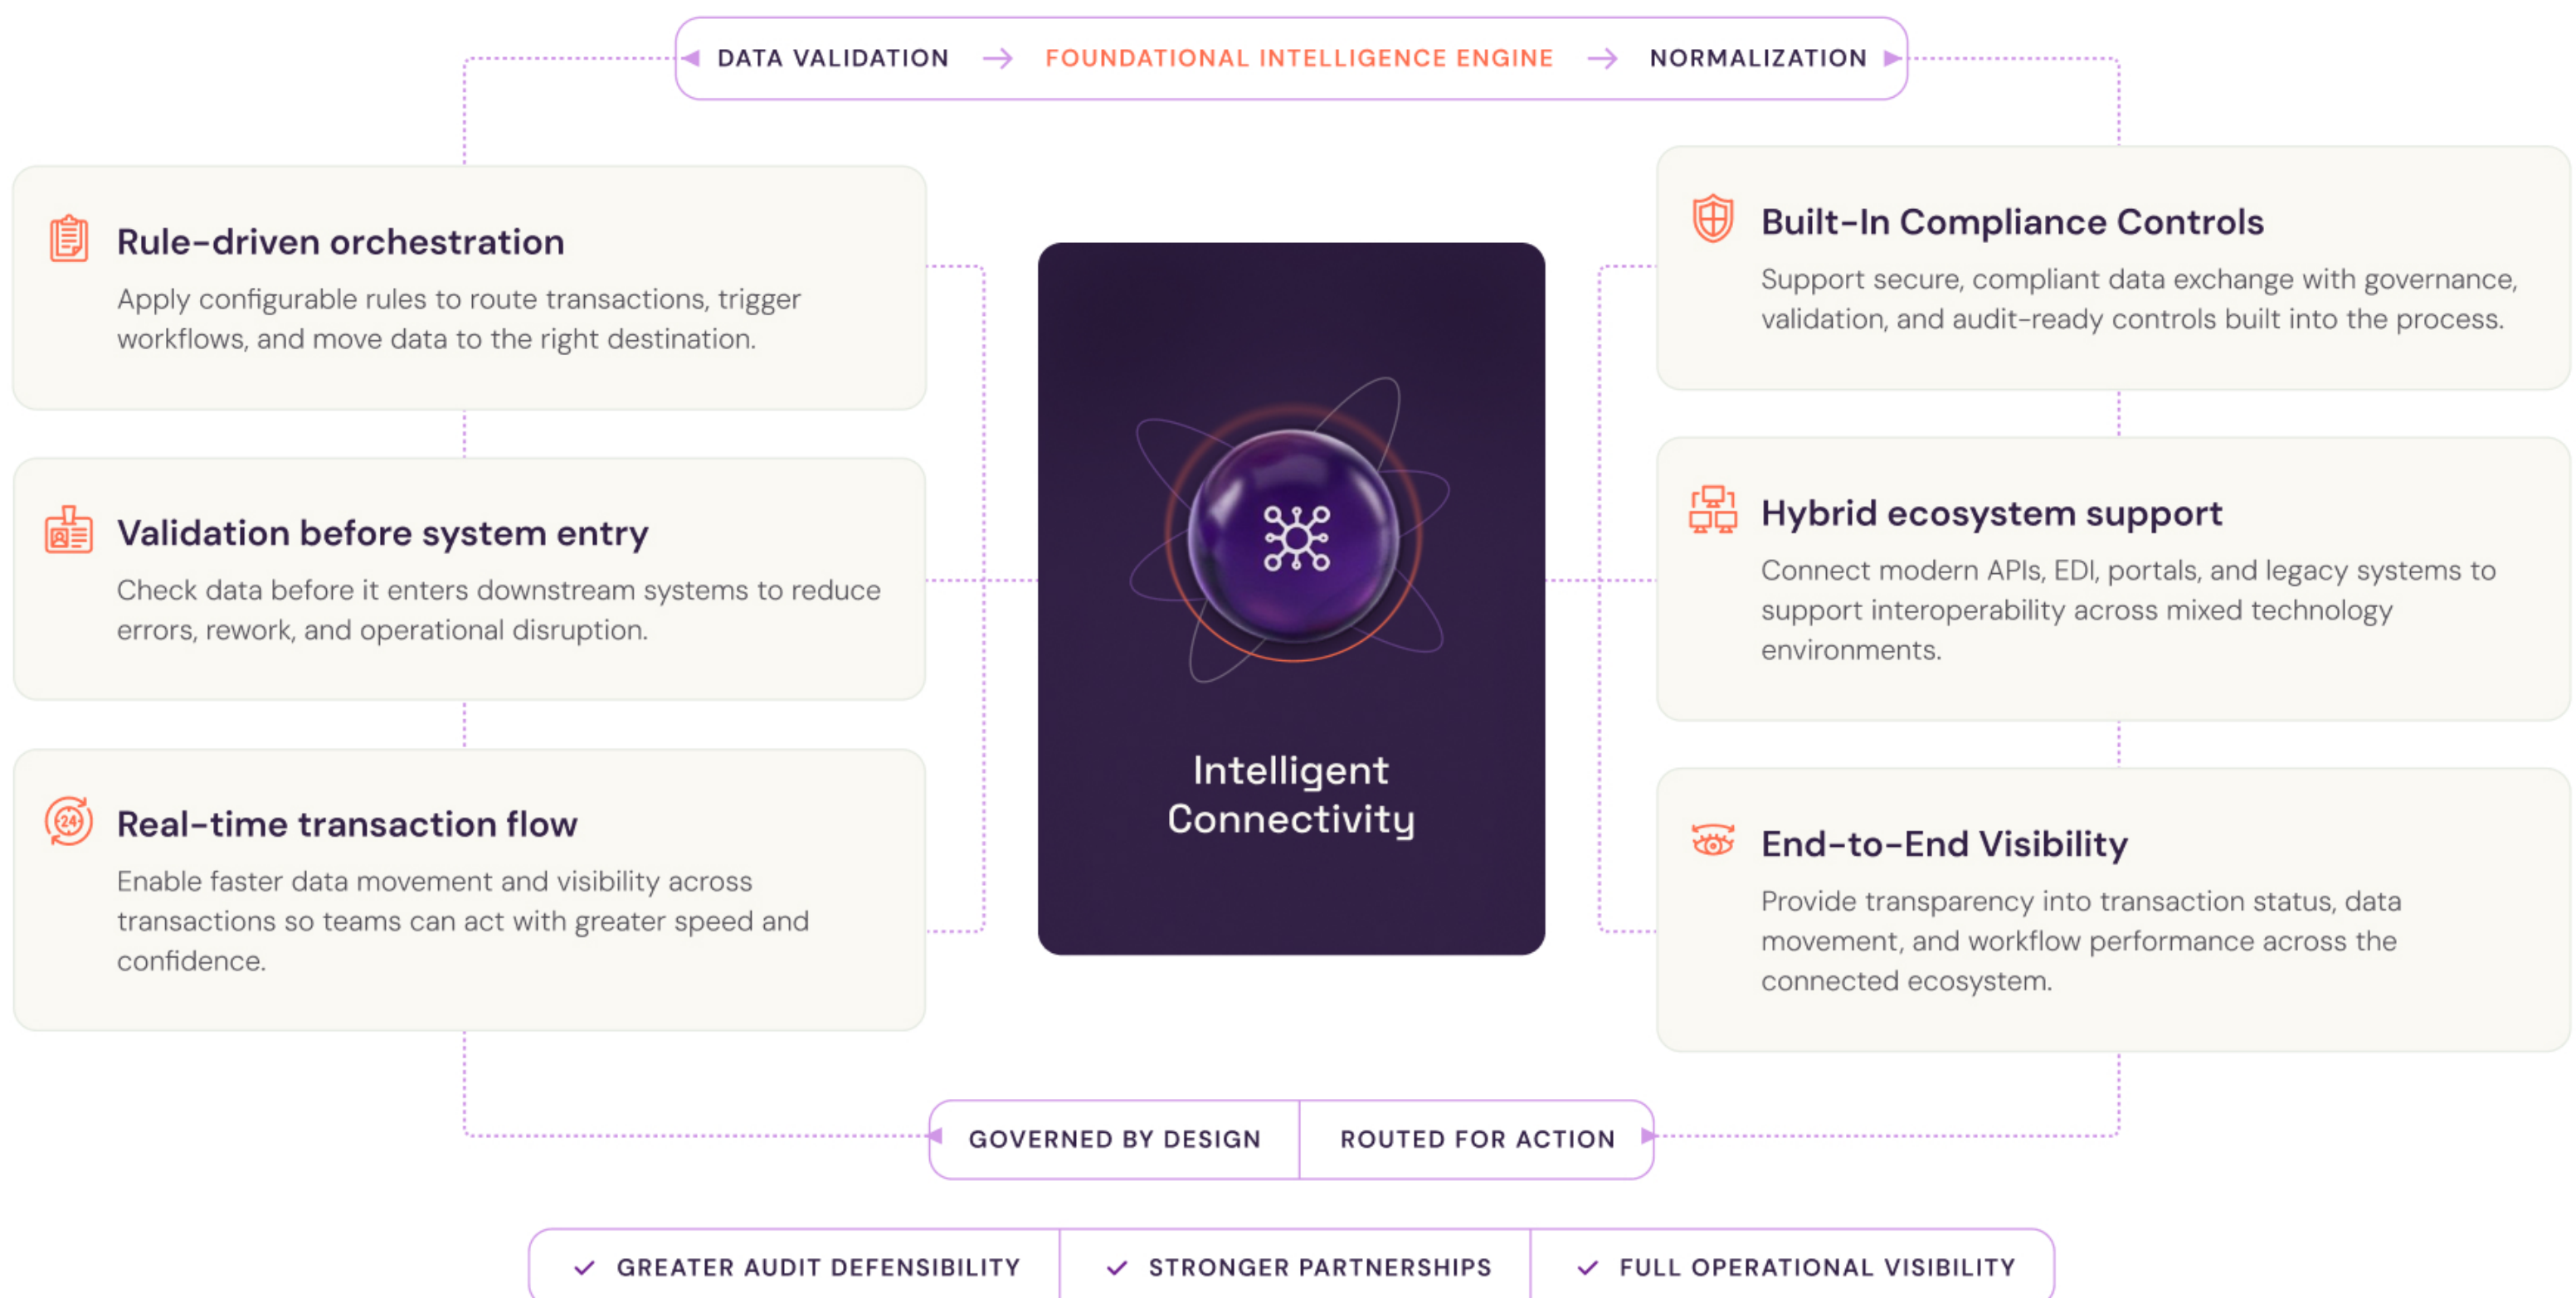

Traditional interoperability connects systems, but struggles with complex data like attachments, clinical documents, and FHIR-based exchanges. Smart Data Solutions makes that data usable, intelligently routing, structuring, and managing transactions so work flows seamlessly across your ecosystem.

Our Foundational Intelligence Engine:

Data validation → Normalization → Governance → Routing

Intelligent Connectivity orchestrates how work moves across your ecosystem

Smart Data Solutions Intelligent Connectivity embeds intelligence directly into the healthcare data exchange; transforming, validating, governing, and routing transactions and their associated data automatically across systems and partners.

Organizations using Intelligent Connectivity achieve

20%

20%

reduction in
operational staffing

75%

75%

reduction in enrollment
file processing turnaround time

Regulatory ready

January 1, 2027 readiness
for interoperability mandates

Solution use cases

834 enrollment orchestration

Prior authorization & referral certification

FHIR interoperability enablement

Network repricing & claim routing

Eligibility distribution & claims conversion

PBM & pharmacy exchange

"Smart Data is the best partner we work
with on a day-in, day-out basis."

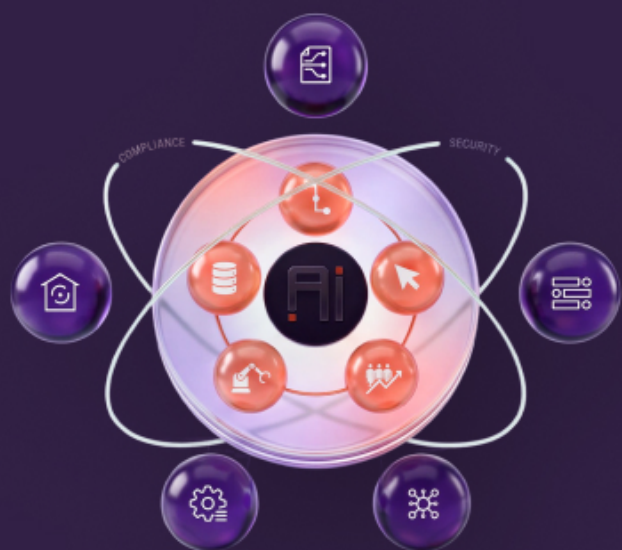

Stephen Fiorino
