

Manage Patient Demand & Simplify Appointment Setting with Schedule

Maximize immunization and clinical opportunities while improving patient care and increasing pharmacy efficiency.

As pharmacies expand clinical services, coordinating appointments becomes essential. Our scheduler gives patients a simple way to book services while helping pharmacy teams manage demand and keep workflows running smoothly.

Schedule from EnlivenHealth simplifies the scheduling of clinical and consultative services, including vaccinations and point-of-care testing. It replaces manual, inefficient processes with a seamless experience for both pharmacy staff and patients. Schedule now features powerful new capabilities that use artificial intelligence (AI) to automatically recommend and recruit pharmacy patients who are in most need of receiving the flu vaccine, and allows patients to jointly book appointments for the flu and COVID-19 vaccines and boosters, using just a single electronic form for documentation.

Take the Hassle Out of Appointment Scheduling

Automate Patient Self-Scheduling

Minimize wait times and improve convenience for your patients while taking manual appointment scheduling off your staff's plate.

Recruit Patients for Clinical Services

Built-in tools allow you to use SMS text messaging and chatbots to reach out to patients and begin the scheduling process.

Reduce No-Shows & Improve Engagement

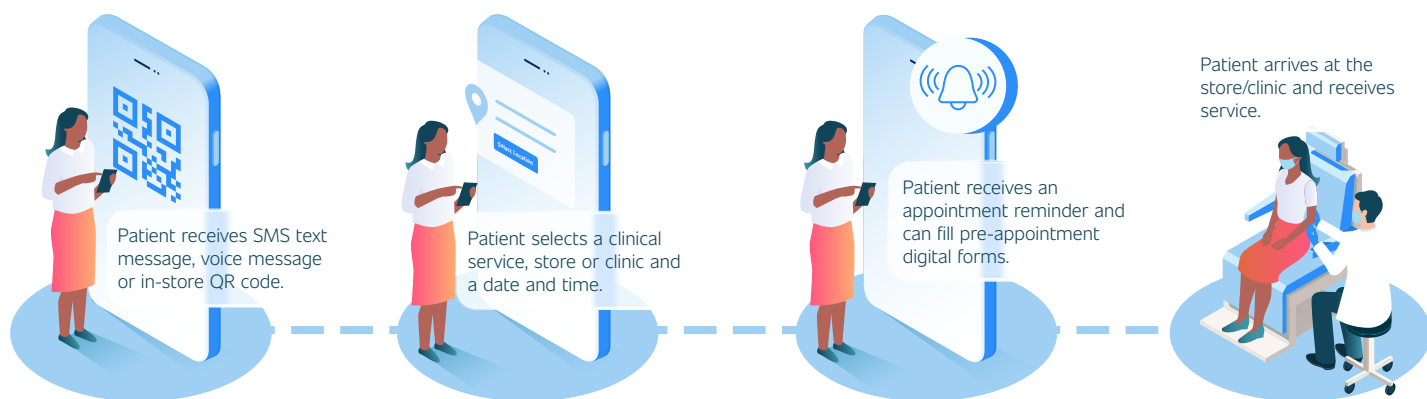

Automatically send convenient appointment reminders to your patients to make sure they are prepared and on-time.

Free Up Staff & Pharmacist Time

Using an automated scheduling system improves operational efficiency in the pharmacy and allows pharmacy staff more time to focus on patient care.

How it works

EnlivenHealth Schedule – the first fully-automated scheduling solution for pharmacies and their patients

Pharmacy Experience

Set Up

Pharmacy customizes clinical service offerings and other attributes before going live with platform.

Pre-Clinic Activities

Initiate

Pharmacy staff can schedule via the platform, or patients can schedule via chatbot link (through email, text message, or on the pharmacy's website).

Prepare

Pharmacy checks schedule and inventory to prepare for patient visit.

During Clinic Activities

Consent

Pharmacist confirms patient's pre-filled electronic consent form.

Post-Clinic Activities

Complete

Pharmacist completes processing the vaccinations in the PMS.

Patient Experience

Learn

Patient informed/learns about COVID-19 Vaccine availability at the clinic.

Sign Up

Patient schedules appointment.

Remind

Patient receives appointment reminder.

Check in

Patient arrives at the clinic and checks in with the pharmacist. If the patient misses their appointment, they will receive an SMS.

Follow Up

Patient receives SMS wellness check-in next day. If applicable, patient receives a follow-up message for series vaccination.
