Novadontics

Empowering Dentists with Innovative Cloud-Based Solutions

Novadontics is revolutionizing dentistry with its exclusive features and advanced cloud-based platform. It has developed an all-in-one dental practice management platform. Designed to aid dentists in diagnosis and treatment planning, the Novadontics platform offers a secure and HIPAA-compliant environment to manage all patient information and health history.

"We empower dental practitioners with intuitive tools like Clinical Notes and Health History Form, ensuring complete and accurate recording of dental procedures. Our innovative features and commitment to continuous improvement empower dental professionals worldwide," says Dr. Louie Al-Faraje, founder and CEO.

Dental practitioners leverage the platform's intuitive dental-oriented Clinical Notes to comprehensively and accurately record dental procedures. The Clinical Notes feature automatically prefills the form with a patient's medical conditions and allergies. Simultaneously, dentists can add other essential details such as patient vitals, medications, and implant-related information. The platform's search function allows them to easily retrieve related procedure codes and descriptions, cross-referencing them with the patient's specific information to identify potential medical risks.

The Novadontics Health History Form allows practitioners to easily track and analyze vital patient information. From medical conditions to allergies and medication usage, the platform ensures all relevant data is readily available. This feature comes in handy when patients have specific medical conditions or histories that may impact certain dental procedures.

Seamless data access and sharing can also be achieved among dental care providers through the Nova SharedCare® feature. Dentists can securely share patient information with specialists or new care providers, ensuring continuity of care and effective collaboration.

To further elevate providers' standard of care, Novadontics offers a checklist guidance module. This feature minimizes complications, promotes adherence to standard protocols, and enables practitioners to customize treatment plans. The feature provides access to expert knowledge in specific procedures, empowering dentists with the necessary tools to optimize patient care.

In addition to its clinical benefits, Novadontics automates administrative functions in dental offices, efficiently streamlining and managing workflows. Its platform integrates clinical, administrative, and patient engagement features into a single

solution, saving time and reducing costs. Appointment booking is also simplified and automated through the Appointment Book feature, which sends reminders via text and email to enhance patient communication and reduce no-shows.

Detailed analytical reports on practice data can be generated using Novadontics' advanced Reports Module. These reports enable data-driven decision-making and long-term planning, giving dental offices valuable insights into their performance and activity.

The platform's marketplace is another unique feature, offering dental products at significantly lower prices than traditional channels. The Novadontics Marketplace provides substantial cost savings for dentists on over 30,000 products from renowned manufacturers and suppliers.

To enrich the clinical skills of dentists, Novadontics offers a comprehensive continuing education platform. Dental practitioners can enhance their knowledge and stay updated with the latest advancements in a variety of dental disciplines with over 300 on-demand courses, lectures, and videos.

Novadontics has recently launched a mobile application for patients, enabling them to search for nearby dental offices, schedule appointments, and provide feedback. This patient-centered feature enhances the overall dental experience and fosters patient engagement.

A smooth onboarding process ensures a minimal learning curve for dental professionals. They can streamline their workflow with access to user-friendly interfaces and AI-driven automation capabilities. The cloud-based platform eliminates the need for software installation or server implementation, making it easily accessible with just a PC and an internet connection. Its full mobile version also allows access via iPad, providing convenience and flexibility to dental practitioners. **CA**
