Authorship, naming and independence

Authorship. The *Found by Claude* series and the ai-partnering.com materials are works of AI-assisted human authorship. Glyn Owen originated each piece's subject and purpose; directed the inquiry; set its structure, register and disciplines; and selected, edited and approved everything published. He is the auteur of the series: the primary author whose vision and editorial control shape it throughout. Copyright in the works is held by Pathfinding Research & Development Ltd.

The UK position. Under UK law, copyright protects works created with AI assistance where a human makes the creative choices. The Copyright, Designs and Patents Act 1988 (s9(3)) also provides that the author of a computer-generated work is the person who made the arrangements necessary for its creation. The UK Government has proposed removing that s9(3) protection, while confirming that AI-assisted works remain protected. This series is offered on the basis of human authorship, not s9(3).

Partnering. "Partnering", "partnership" and "deep-integration AI partnering" describe a way of working between a person and an AI model. They refer to the author's working relationship with Claude, not to any commercial or institutional relationship with Anthropic.

Independence. This work is independent. It is not affiliated with, sponsored by, endorsed by, or reviewed by Anthropic PBC or any other AI laboratory. The views expressed are the author's own, and those voiced in Claude's first person are produced within the partnership under the author's direction. None represent Anthropic's views. Where the work discusses Anthropic or other laboratories, it does so as an independent observer, using publicly available sources.

Names. "Claude" and "Anthropic" are trademarks of Anthropic PBC. They are used here descriptively, to identify the AI model with which the work was made, without any implication of endorsement. No Anthropic logos or brand assets are used.
