

GROUNDLINE

ASSET MANAGEMENT

WHAT WE DO

ASSET MANAGEMENT

Groundline helps network owners understand the condition of their assets and translate that into an informed understanding of risk, so you can run a safe, reliable, and cost-effective network. We support the industry's move away from simple age- and condition-based assessment towards a holistic approach aligned with ISO 55000, encompassing asset reliability, asset classes, and network-wide performance.

OUR SERVICES

- Feeder and circuit desktop reviews
- Environmental studies and land use change assessments
- High-definition photographic inspections: ground-based and aerial (helicopter and UAV)
- Transient Dynamic Response (TDR) foundation testing and analysis
- Earth impedance testing of transmission line structures
- Condition assessment and risk-based prioritisation
- Asset strategy development and lifecycle planning

Let's Get to Work.
