

GROUNDLINE

SITE ENGINEERING AND CONSTRUCTION SUPPORT

WHAT WE DO

SITE ENGINEERING AND CONSTRUCTION SUPPORT

Our site engineering capability is rooted in construction experience; We started on the ground, and that knowledge shapes everything we do, including how we design. Groundline has extensive engineer-to-contract, project engineer, and construction management experience, and for projects where on-site technical support matters, we provide robust, accurate operational support that keeps construction moving safely and to programme.

OUR SERVICES

- Pulling calculation checks and rigging load calculations
- Engineering field checks and structural capacity checks
- Plant and equipment compliance checks
- Stringing and sagging management methodologies, machine site setup, conductor running tensions, critical observation spans
- Uplift support and procedural and quality assurance documentation
- As-built verifications and documentation
- Line route survey and staking; structure set-out pegging
- Lattice tower stub setting and pole base plate engineering support
- Construction and maintenance structural and electrical clearance checks

Let's Get to Work.
