

tolbest
FieldMark

See where the spray has landed.

A visible, non-permanent indicator that shows
coverage while the job is still in progress.

tolbest

Take the guesswork out of spray coverage

When a treatment is clear or difficult to see once it reaches the ground, the operator can be left relying on the route already travelled to judge what has and has not been covered. Across a larger area, that can make missed sections, unnecessary overlap or unwanted drift harder to spot while the work is still underway.

FieldMark makes the application visible. Added to the spray tank alongside the treatment being applied, it colours the sprayed surface so the operator can see coverage in real time. That makes it easier to identify where spray has landed, where it has not and where passes may have overlapped.

Once the job is done, the colour fades naturally through sunlight, rain and normal wear, leaving no lasting mark on turf, crops or soil.

Features

Confirms spray coverage in real time removing guesswork over missed or overlapped areas.

Highlights drift as it happens, helping protect buffer zones, watercourses and neighbouring land.

Fades naturally after use with no lasting staining on turf, crops or soil.

Non-toxic formulation – Suitable for use with all UK-authorized Plant Protection Products.

Washes out with the standard tank rinsate with no special cleaning required.

Correct coverage while you're still on site

For contractors, grounds teams and operators, missed coverage does not just affect the result. It can mean additional product, extra time and potentially another pass over the same area.

By making gaps and overlaps visible while spraying is still underway, FieldMark gives you the opportunity to correct coverage there and then. That can help avoid unnecessary repeat application, make better use of the treatment in the tank and reduce the likelihood of returning to areas that were missed first time.

Whether you are carrying out the work yourself or responsible for delivering treatment across multiple sites or contracts, that extra visibility can make the whole application easier to manage.

See more while you spray

Confirm coverage in real time

See which areas have already been treated without relying on memory or guesswork.

Spot gaps and overlap

Make missed areas and repeated coverage easier to identify while there is still time to correct them.

Make drift visible

See unwanted drift as it happens, helping protect buffer zones, watercourses and neighbouring land.

Visible when you need it, temporary when you don't

The colour fades naturally after use and leaves no lasting mark on turf, crops or soil.

Datasheets

Need the technical detail?

Scan to download the current **FieldMark Technical Data Sheet**, including application rates, safety, handling and storage information

Typical Applications

Golf courses and sports turf

See spray passes clearly across managed turf.

Amenity and public land

Give operators a more visible application across parks and other managed public areas.

Arable and grassland farming

Support clear coverage across agricultural spraying.

Different spraying equipment

Suitable for boom sprayers, backpack sprayers and handheld equipment, with specific application rates for Mankar ULV and hydraulic sprayers.

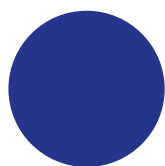

Colour

Blue

Works alongside the treatments already being applied

FieldMark can be added to the spray tank alongside:

Herbicides | Fungicides | Insecticides | Liquid fertilisers | Biostimulants

Blue

A result you can see. Products you can rely on.
Established in 1989, Tolbest develops and supplies specialist dyes and powders for applications where a clear, reliable result matters.

Our products are used across environmental engineering, utilities, food processing, pest control, agriculture and other specialist applications in the UK and around the world.
