FlowTrace

Make hidden water movement visible.

Trace routes, confirm connections and investigate suspected leaks with a clear, visible result.

tolbest

Make hidden water movement visible

When water disappears into a drain, pipe or underground network, finding out where it travels can quickly become a process of elimination. A suspected leak, an unexpected connection or an unclear drainage route can all be difficult to investigate when the movement itself is hidden.

FlowTrace makes that movement visible. Dissolved in water and introduced into the area being tested, the concentrated tracing powder produces a strong, clearly visible colour that can be followed through the system and identified where the water re-emerges.

For drainage professionals, engineers, contractors and utilities, it provides a straightforward way to trace routes, check connections, investigate suspected leaks and verify flow paths.

No unnecessary complication, just a clearer picture of what is happening below the surface.

Features

Non-toxic formulation.

Six colours to suit the site and visibility needed.

Strong, clearly visible colour from a small quantity of powder.

Dosage can be increased on site for a stronger, more concentrated colour where the water volume in the test area is hard to estimate.

At a Glance

6 colours

Green (Fluoresceine), Red E123, Yellow E102, Purple E151 Blend, Blue E133, Orange E110

4 standard pack sizes

200g | 1kg | 5kg | 10kg

Other sizes available on request

Made to be straightforward

A specialist product should not create more questions than it solves. **FlowTrace** is supported by clear technical information, practical pack sizes and a consistent formulation, helping make it straightforward to specify, supply and use.

From first product selection through to application on site, the aim is simple: a dependable result, backed by the information you need, whether you're specifying FlowTrace for a project, stocking and supplying it to customers, or using it out in the field.

Clear results from a specialist tracing dye

See the route clearly

FlowTrace creates a strong visible colour, helping show where water travels through drainage and water networks.

A little goes a long way

The concentrated formulation provides a clear result from a relatively small quantity, with a 200g pack capable of treating up to **10,000 litres of water**.

Choose the right colour for the job

Available in Green (fluorescent), Red, Blue, Purple, Orange and Yellow, giving you options for different sites and viewing conditions.

Adjust visibility on site

Where the volume of water is difficult to estimate, the amount used can be increased to create a stronger, more concentrated colour.

Purple E151
Blend

Blue E133

Orange E110

Typical Applications

Trace drainage

Follow water through drains, pipes and underground networks where the route cannot be seen directly.

Confirm connections

Check whether drainage connections lead where expected and investigate suspected cross-connections or misconnections.

Investigate leaks

Identify where water travels or re-emerges, helping narrow the area that needs further investigation.

Test private drainage and soakaways

Support cesspool testing and drainage or soakaway performance checks.

Verify flow paths

Give engineers and contractors a visible way to check how water moves through a system.

**A result you can see. Products you can rely on.
Established in 1989, Tolbest develops and supplies
specialist dyes and powders for applications where a
clear, reliable result matters.**

Our products are used across environmental engineering,
utilities, food processing, pest control, agriculture and other
specialist applications in the UK and around the world.
