VoidMark

Make condemned material unmistakable.

Permanent visual identification for animal by-products that must remain outside the food chain.

tolbest

Clear identification where there can be no ambiguity

When animal by-products have been condemned, there should be no uncertainty about what can and cannot remain within the food supply chain. That distinction needs to stay clear as material moves from initial identification through handling, storage and collection.

VoidMark creates a permanent visual mark so condemned animal by-products remain immediately recognisable throughout that process.

Developed for abattoirs, meat plants, renderers and associated operators, the range includes category-specific formulations for Category 1 and Category 2 material. This helps teams use the correct colour for the material being handled and keep it clearly separated from anything destined for further use.

A choice of powder, water-soluble, concentrate, ready-to-use and pre-measured formats also means the product can fit different operating processes without compromising that clear visual identification.

Features

Category-correct colour for ABP Category 1 and Category 2 marking.

Food-grade formulation.

Water-soluble bag option dissolves fully in the mix, reducing mess and handling.

Ready-to-use liquid option available – no dilution needed.

Pre-measured 25g sachets for consistent, repeatable dosing.

Powder

1 kg polybag | 1 kg water-soluble bag

Liquid

Concentrate 5 ltr jerry | Ready to Use 5 ltr jerry

Sachet

10 × 25g sachets

Clear through every stage

VoidMark is designed to keep the status of condemned material clear beyond the point at which it is first marked. Because the colour remains visible through handling, storage and collection, everyone involved can see what the material is and how it needs to be treated.

Whether you are applying the product on site, responsible for food safety or operational controls, or supplying it into regulated environments, that clear distinction helps support a process where condemned material stays identifiable and separate from anything destined for further use.

Made for controlled environments

Permanent visual identification

Once treated, condemned material remains visibly coloured through handling, storage and collection.

Category-correct formulations

Patent Blue E131 is used for Category 1 animal by-products. Black P/N E151 is used for Category 2 material.

Food-grade colourants

Both VoidMark formulations are food-grade stains developed specifically for condemnation marking.

Practical format options

Different preparation and dosing formats allow sites to choose the option that best fits their process.

Colour

VoidMark Patent Blue E131

For Category 1 animal by-products

Patent Blue creates a permanent, visible blue mark for Category 1 material, the highest-risk category.

Application solution: 0.5%

Patent Blue V
(E131)

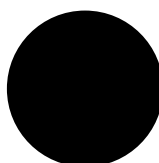

Colour

VoidMark Black P/N E151

For Category 2 animal by-products

Black P/N provides a clear black mark for Category 2 material, keeping it visually distinct from Category 1 and from anything destined for further use.

1% to 2.5% for the powder formulation.

Black P/N
(E151)

Typical Applications

Abattoirs

Mark condemned Category 1 or Category 2 material at the point it is identified.

Meat plants

Maintain a clear visual distinction between condemned animal by-products and material intended for further use.

Knackermen and renderers

Keep condemned material recognisable through collection and onward handling.

Food-safety processes

Support clear identification and separation within regulated animal by-product handling.

A result you can see. Products you can rely on.
Established in 1989, Tolbest develops and supplies specialist dyes and powders for applications where a clear, reliable result matters.

Our products are used across environmental engineering, utilities, food processing, pest control, agriculture and other specialist applications in the UK and around the world.
