LakeTint

Reduce the light that supports algae growth.

Colour and light management for ponds, lakes, fisheries and managed water features.

tolbest

Manage the conditions that allow algae and weed to grow

Managing a pond, lake or water feature is not simply about how the water looks. Sunlight penetrating below the surface creates conditions that support submerged algae and weed growth, which can become an ongoing issue across managed bodies of water.

LakeTint provides a straightforward way to manage those conditions by reducing light penetration through the water.

The range includes two formulations for different priorities. LakeTint Black creates a deep, mirror-reflective appearance for golf-course, ornamental and designed water features, while also helping suppress algae and weed growth. LakeTint Blue is developed primarily for commercial algae and weed control across ponds, lakes and fisheries.

Both are liquid concentrates, simple to apply and formulated for use in environments where fish, wildlife and plant life matter.

Features

Effective algae & weed control by limiting light penetration

Suited commercial lakes, fisheries & large ponds

Doubles as a leak tracer in waters where fish are present

Non-toxic formulation – safe for fish, wildlife and plant life

Simple to apply – no specialist equipment needed

Pack sizes

1 litre | 5 litre

Other sizes available on request

Straightforward from specification to application

Whether you're managing a golf course or fishery, responsible for estate or municipal water, specifying a treatment for a client, or supplying LakeTint to customers, it helps to know exactly what you are working with. Clear coverage rates make product requirements easier to calculate, concentrated formats keep application straightforward, and a choice of pack sizes supports everything from individual water features to larger commercial applications. With clear guidance around dosage and reapplication too, LakeTint is easy to plan into both one-off and ongoing water management.

Manage the water, not just the appearance

Reduce light penetration

LakeTint limits the sunlight reaching below the water surface, helping suppress submerged algae and weed growth.

Non-toxic formulations

Both LakeTint Black and Blue are confirmed as non-toxic and safe for fish, wildlife and plant life.

Straightforward application

Calculate the required dosage and add the product to the water body. No specialist application equipment is needed.

A visible result

The colour of the water provides an immediate visual change as part of the treatment.

Datasheets

Colour

LakeTint Blue

For commercial algae and weed control

Primarily for larger or commercially managed bodies of water where algae and weed control is the main requirement.

Application: 1 litre treats up to 2.5 million litres of water

Blue

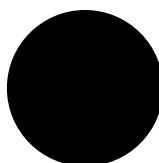

Colour

LakeTint Black

For appearance and water management

Creates a deep, mirror-reflective water surface, making it particularly suited to environments where appearance is important.

Application: 1 litre treats up to 500,000 litres of water

Black

Typical Applications

LakeTint Blue

- Commercial fishing lakes & stocked fisheries
- Estate & municipal lakes
- Balancing & attenuation ponds
- Leak tracing in waters where fish are present

LakeTint Black

- Golf course water features
- Ornamental & estate water features
- Architectural & designer water features
- Amenity ponds and lakes

A result you can see. Products you can rely on.
Established in 1989, Tolbest develops and supplies specialist dyes and powders for applications where a clear, reliable result matters.

Our products are used across environmental engineering, utilities, food processing, pest control, agriculture and other specialist applications in the UK and around the world.
