

Foundation Suite: Operations in One Place

Staffed. Equipped. Compliant.

The Foundation Suite handles the daily machinery of running an agency. SHIFT builds and fills schedules, VAULT tracks equipment and inventory, FLEET manages vehicles and maintenance, and EDIFY pushes policy and captures acknowledgment. All four are built on COMS, so schedules, assets, and policy tie back to the same people and org chart. No spreadsheets, no lost gear, no policy nobody read.

The Problem

The basics of running an agency are scattered across disconnected tools.

- **Scheduling breaks easily.** Shifts live in spreadsheets that fall apart the moment someone calls out.
- **Gear goes untracked.** No one knows what equipment and vehicles the agency owns, or where they are.
- **Policy goes unread.** Updates go out by email and no one tracks who actually saw them.

Benefits

Keep people, gear, and policy in sync.

- **Scheduling that holds up.** SHIFT builds and fills shifts and handles overtime and callouts in one view.
- **Know what you own.** VAULT tracks every piece of equipment from issue through return.
- **Vehicles under control.** FLEET manages the fleet, maintenance, and assignments in one place.
- **Policy people actually read.** EDIFY pushes updates and captures acknowledgment automatically.

Operations That Know Your People.

Most agencies run scheduling, equipment, fleet, and policy on four unrelated tools, and none of them know your roster. The Foundation Suite does, because all four sit on COMS. A schedule knows who's certified for a post. An equipment record knows exactly who's holding it. A policy update knows every member who still needs to acknowledge it. When the org changes, all of it updates at once, with no re-entry and no drift.

How it Works

Four tools, one connected operation.

1. **Build the schedule.** SHIFT staffs every shift and handles overtime, swaps, and callouts.
2. **Issue the gear.** VAULT assigns equipment to members and tracks it from issue to return.
3. **Manage the fleet.** FLEET keeps vehicles, assignments, and maintenance on schedule.
4. **Push the policy.** EDIFY distributes updates and records who has acknowledged them.

Features

- **Scheduling.** SHIFT builds shifts and manages overtime, swaps, and callouts.
- **Equipment tracking.** VAULT records what's issued, to whom, and when it's due back.
- **Fleet management.** FLEET tracks vehicles, assignments, and maintenance.
- **Policy management.** EDIFY distributes policy and captures acknowledgment.
- **Coverage visibility.** See gaps, overtime, and availability at a glance.
- **Built on COMS.** Shifts, assets, and policy tie to the same people and org chart.
