

Filtration Systems

Darlly offers filtration systems that combine the stages of pre-filtration, clarification, color removal, and microbial stabilization to save floor space and operate more efficiently.

By effectively removing contaminants, organic pigments, sediment, particles, and spoilage organisms, our high performance filtration systems can significantly improve the taste, odor, shelf life, and visual clarity of your food and/or beverage products.

We can offer standardized systems or customize based on your requirements and save your effort and costs of designing and configuring a system that may meet your needs.

Features

- Systems consist of several filtration units and are fully equipped (pump unit, pressure gauge, measuring and shut-off valves, pipelines, etc.)
- Stainless steel construction provides excellent corrosion protection for rugged, longer service time
- The filter housings and the pump are connected by a quick installation pipeline
- Simple structure, light and flexible, easy for workers to operate, and can be freely moved to the production line for work
- Systems are available with or without valves, with or without a pump, with or without a cart

Applications

- Suitable for the broadest range of industrial applications from process fluid streams for water, aqueous solutions, oils, cannabis and fine chemicals
- Food and beverage production: filtration of juices, syrups, food ingredients, edible oil and bottled water

Product Quality

- Manufactured within an ISO 9001:2015 certified quality management system
- Certification of Quality document can be provided upon request
- Please contact your Darlly representative to learn more about how our products can make your process more productive and cost efficient.
