

Top 10 Benefits of Cloud-Based Practice Management Software

Introduction

What Is Cloud Computing?

Cloud computing is the on-demand delivery of information and data services via the internet. It allows organizations and businesses to access technology services without the need for buying, owning, and maintaining physical data centers and servers.

What Is Software as a Service (SaaS)?

Software as a service (SaaS) is a method of delivering software through a subscription, in which a cloud provider hosts applications and distributes them via the internet. In this model, there is no need to purchase, license, or install software on individual computers.

What Are the Advantages of Cloud-Based Practice Management Software?

Cloud-based practice management software (PMS) provides numerous advantages, including lower costs, heightened security, and improved mobility. Novadontics uses this system to provide a highly advanced all-in-one dental practice management platform for dental practices of all sizes. This eBook will explain the top 10 benefits of cloud-based PMS systems and how they apply to the Novadontics platform.

TOP 10

Benefits of Being “in the Cloud”

1 Cost Savings

Novadontics' fully cloud-based practice management software (PMS) saves thousands of dollars over legacy PMS systems, which require software purchase and the use of an in-house server.

Following are some of the costs of legacy PMS systems:

- ✓ Upfront software costs up to \$8000.
- ✓ There are ongoing monthly or annual costs for backup, tech support, software upgrades, etc.
- ✓ Server costs \$4000 to \$5000 and has to be replaced every 3 to 5 years.
- ✓ IT help costs \$300 to \$800 per month.

Novadontics is a SaaS (Software as a Service) company, providing the following savings:

- ✓ No upfront cost to purchase the software. One monthly payment will cover usage, data hosting and backup, technical support, and upgrades.
- ✓ No need for in-house server (\$4000 to \$5000 savings).
- ✓ No need for IT help (\$300 to \$800 savings per month).

2 Reliability

Cloud-based computing provides a much more reliable way to store data over legacy PMS systems. While a local, in-house server may crash at any time and backups often prove unreliable, data stored in the cloud is protected against loss with 100% reliable backup.

3 Security

Data transmitted, stored, and backed up on the cloud is highly secure, as it is the cloud host's #1 priority to closely monitor security, making it more efficient and effective than conventional in-house IT systems. Novadontics manages all of its data through a Tier 1 Amazon Web Services (AWS) data center, which has over 300 cloud security tools and the trust of the most security-sensitive organizations, such as government, health care, and financial services.

4

HIPAA Compliance Made Easy

With its cloud-based offsite data storage system, Novadontics offers a completely secure and HIPAA-compliant method of managing patient information and health history. This data can also be accessed and shared seamlessly with other dental care providers in a HIPAA-compliant environment using the Nova SharedCare feature. This helps dentists when referring patients to a specialist or if records need to be shared with a new dental care provider.

5

Mobility

Novadontics' cloud-hosted system allows you to access patient data anywhere, anytime, and on any computer or mobile device with internet access. Novadontics' powerful practice management capabilities are available whenever you need them, directly from your web browser. Transition from your desktop or laptop to your mobile device without missing a beat—your planning activity automatically syncs across devices.

6

Efficiency

Business = busyness, and dental practices are no exception. With easy data migration, no software to install, no interruptions, no IT maintenance needed, and automatic software updates, Novadontics cloud-based system allows providers and staff to spend less time and fewer resources on setting up and maintaining their practice management system and instead focus on the important things: high-quality patient treatment and growing their practice.

7

Insight

Through the power of cloud-based computing, the Novadontics Dashboard consolidates and presents data from across the various modules as simple, easy-to-read lists and charts. For example, monthly, quarterly, yearly, and total data are shown for orders, spending, patients, and CE credits, and colorful graphs present spending history by vendor as well as patients by marketing source and status. This at-a-glance presentation of data allows for quick analysis and monitoring of practice status and activities to help you meet your goals. In addition, Novadontics cloud-based platform automatically generates reports that are invaluable for managing a successful dental practice.

8 Improved Collaboration

With Novadontics, because all data is stored on the cloud, and changes automatically sync in real time across all screens and devices, staff and providers can easily view and share up-to-date patient and scheduling information across the platform. In addition, as mentioned earlier, with the integrated Nova SharedCare feature, with only a few clicks you can share selected patient records with another provider in a HIPAA-compliant environment. You can just as easily stop sharing the files at any time.

9 Quality Control and Consistency

In a traditional system, it is all too easy for errors to be made, such as creation of multiple versions of documents and inconsistent reporting. On Novadontics' cloud-based platform, all documents and data are stored in one location for ease of accessibility and avoidance of errors and confusion. Integrated workflow and guidance simplify and streamline the collection and recording of data and provide for consistency in format across different users.

10 Disaster Recovery

Although Novadontics cannot protect against every disaster or disruption that might affect your practice, our cloud-based system can significantly limit the resulting unproductive downtime. Since data is stored securely offsite, it can be quickly recovered following natural disasters or power outages, getting your practice back up and running as quickly as possible.

About Novadontics

Novadontics' patented cloud-based practice management software (PMS) is the first and only dental PMS built by dentists for the general and dental implant industry. Based on expert guidance and experience, Novadontics streamlines traditionally fragmented functions, allowing you to efficiently manage your practice, optimize patient care, and grow your business.

A few things that make us different:

- ✔ Innovative, integrated software features that aid in diagnosis and treatment planning while managing all patient information and health history in a completely secure HIPAA-compliant cloud environment
- ✔ Industry-leading business, clinical, and front-office tools that streamline administrative functions with mobile access from any web-enabled device
- ✔ Network of experts providing online consultation support
- ✔ One-of-a-kind online marketplace offering tremendous discounts on over 24,000 products from more than 40 of the dental industry's most prominent and reputable manufacturers and suppliers
- ✔ Second-to-none continuing education platform
- ✔ Integrated patient engagement tools
- ✔ Seamless integration with the Care Pulse online booking app to help patients and providers connect
