

A Clear Path to Launch

A collaborative process with clear next steps.

Dail Digital can build you a flexible, professionally managed website that helps customers understand your business and helps your team stay ready for what comes next.

1

DISCOVERY & SITE MAP

In our first meeting, we'll go over your goals, expectations, and confirm next steps, including what pages will be included.

2

WIREFRAMING

We will build out the bones of your website, and will create layouts to show how content, images, and calls to action will be placed on each page.

3

DESIGN & DEVELOPMENT

We build out the design of your website, including colors, fonts, logos and any animations.

4

LAUNCH

Once we have your approval, we will perform extensive quality assurance checks, make sure your site is mobile responsive, and push your new site live!

MAINTENANCE OPTIONS

Dail Digital Manages

We handle hosting, website support, reporting, and ongoing updates based on your selected maintenance plan. Your team can update approved content or send changes to us.

Your Team Manages

We can transfer the website to your Webflow account, giving your team direct control of hosting, content, updates, and ongoing maintenance.

Either way, you keep control of your domain and website.

Keep in mind that project timing depends on scope, content readiness, integrations, and review cycles.
