

Ministry
of Defence

Case Study:

Building the Blueprint for Modernisation

*The Role of **Target Architecture** in
modernising defence medical
systems.*

Digital *Delivery*, Done Right.

01

The Challenge

SATIGO was engaged to support the Ministry of Defence in replacing legacy Military Medical Solutions with COTS, delivered over the Cloud.

Client need: Develop the Target Architecture needed to underpin a multi-supplier, NHS-aligned COTS migration.

Key Challenges:

- Defining the as-is legacy archiving capability
- Aligning Fixed and Deployed environments across Legacy and TO-BE states
- Validating COTS product viability within a secure, multi-supplier landscape

Digital *Delivery*, Done Right.

02

The Project & Delivery Approach

Our team supported the Alpha stage, working alongside the Programme Manager and Lead Architect to shape the Target Architecture.

Project focus:

- Mapping the existing archiving capability (Level 0 and 1)
- Producing Business Architecture documentation for AS-IS and TO-BE states
- Assessing COTS product viability for future integration
- Identifying more efficient approaches to service delivery

We began by **establishing a clear as-is view** before shaping the environments and products needed to support delivery. To meet the MOD's security and locality requirements, we built a dedicated SC Cleared team structured around a clear engagement model.

Digital ***Delivery***, Done Right.

03

PMO & Delivery Management

SATIGO's PMO provided active oversight to keep delivery secure, structured and resilient to resourcing risk.

Managing Resourcing Risk:

- Identified early concern over resources leaving mid-project during a critical phase
- Introduced a milestone-based bonus structure, holding back 10% of day rate until completion
- Kept allocated resources committed and the programme on track

Team & Engagement:

- Resource type: burst and dedicated resource
- Skill matrix: delivery management and PMO
- Local presence: resources based near Corsham
- Engagement model: Statement of Work

Digital *Delivery*, Done Right.

SATIGO's Digital Capability Services

SATIGO helps public sector and regulated organisations access specialist digital expertise through outcome-focused engagements.

From focused discovery to multidisciplinary digital delivery, we structure projects around the problem and desired outcomes.

Have a Similar Project or Delivery Challenge?

Whether starting discovery, accelerating a programme, or adding specialist capability, we structure the requirement and build the right delivery approach around it.

Digital *Delivery*, Done Right.
