

Cyber Security Health Check

See your security more clearly

You may already have cyber security tools and controls in place, but you may not be aware of every risk, gap or blind spot.

Our complimentary Cyber Security Health Check gives you an independent review of your current security posture. We'll help you understand what is working, uncover hidden risks and give you clear, practical recommendations to strengthen your cyber resilience.

• At A Glance

What is it?	A complimentary cyber security review
Who is it for?	Organisations looking to validate security controls and identify potential risks
How long does it take?	Typically 2-3 weeks
Customer effort	Minimal involvement required
Business impact	Non-intrusive and designed not to disrupt operations
Outcome	A detailed report with findings and recommendations

Why book?

- ✓ Validate existing security investments
- ✓ Explore opportunities to simplify security operations
- ✓ Identify risks and security gaps
- ✓ Strengthen cyber resilience
- ✓ Receive practical recommendations from security specialists
- ✓ Discover potential blind spots

You'll receive:

Executive Summary

A high-level overview of your current security posture and the most important findings.

Risk & Gap Analysis

Identification of potential vulnerabilities, coverage gaps and areas requiring attention.

Threat Observations

Insights into suspicious activity and potential security concerns identified during the assessment.

Practical Recommendations

Clear guidance on how to strengthen security, improve visibility and reduce risk.

What makes our Health Check different?

Light-touch approach

Quick to set up, simple for your team and designed to run without disrupting users, applications or daily operations.

Monitor mode only

The assessment runs in monitor mode only, so it observes activity without blocking, preventing, remediating or enforcing changes.

Non-intrusive assessment

Read-only visibility into activity across the platform, without interfering with your existing security tools or business applications.

Threat Detection
<45S
average MTTD

24/7 monitoring
and support

Frequently Asked Questions

> Will the assessment impact our environment?

No. The assessment is designed to run quietly alongside your existing security controls without disrupting users, applications or day-to-day operations. No prevention, blocking or remediation activities are carried out as part of the assessment.

> How is our data protected?

All information gathered is handled under strict confidentiality requirements and is used solely to complete the review and deliver findings. Assessment data is securely managed and removed following completion of the engagement.

> How much involvement is required from our team?

Very little. Most organisations only need to attend a kick-off session, a short onboarding session and a final findings review. The assessment then runs in the background with minimal day-to-day participation required.

> We already have cyber security tools in place. Is it still worthwhile?

Absolutely. The purpose of the Health Check is to validate your current security posture, identify potential gaps and provide an independent view of areas that may require attention. Many organisations use it to gain confidence in their existing investments.

Ready to understand your security posture?

Our Cyber Security Health Check helps you identify risks, validate existing controls and prioritise actions that strengthen resilience.
