THE SITE OVERHAUL

We Rebuilt TatungBytes From the Disk Up

The new site is live at **tatungbytes.co.uk**. Here's everything that changed, and the one thing that changed most.

Hello, and welcome to the very first TatungBytes newsletter.

There's no better moment to start one. For the past few weeks the whole site has been in the workshop, and it's finally ready to show off. Nothing about the Einstein community has changed. The disk images, the guides and the people keeping this 1984 machine running are all still here. What's changed is almost everything about how TatungBytes presents it, and one thing in particular.

Z80 ASSEMBLY COURSE

A Completely Rewritten Z80 Assembly Course

The biggest change by far is the course itself. All 30 parts have been rewritten from scratch, taking you from your very first instruction through to writing real games on real hardware. As far as we know, it's the only course anywhere on the internet that teaches game programming in Z80 assembly specifically for the Tatung Einstein. The Einstein has never been well documented, and what information exists is scattered across old books and articles that often disagree with each other. So every fact the course relies on has been confirmed by actually running code on the machine and observing what happens. If it couldn't be verified, it isn't in there.

DOWNLOADS

A Rebuilt Library of More Than 430 Titles

The whole Downloads collection has been reconciled against the community's own records: games, tools, manuals, magazines and firmware, each checked for the right category, filename, publisher and cover art. Duplicate entries have been cleared out, and anything still genuinely missing now shows a clear placeholder instead of a blank box.
