PACIFIC LINK

FACT SHEET

Key benefits

Pacific Link, a new pipeline from central Alberta to Canada's west coast, can create a stronger, more secure, more resilient country by delivering our abundant oil resources to growing markets in the Asia-Pacific region and beyond.

Canada currently sends most of its oil exports to a single market, which limits its freedom to trade widely and set prices competitively.

Pacific Link will connect Alberta's abundant oil resources to Canada's west coast so Canada can further diversify trade partners, earn more per barrel and better reach global markets whose energy demands are forecast to grow fastest in the years to come.

During the 50+ years Pacific Link will operate, it will benefit Canada in many ways.

Albertans will receive more than $265 billion in additional royalties from increased oil production.

British Columbians will receive an annual royalty payment and additional municipal property taxes and see 70,000 new direct and indirect jobs.

The Government of Canada will receive billions in new revenue that can be used to fund education, health care and other services Canadians depend on.

Workers will benefit from 140,000 direct and indirect jobs created by upstream production and pipeline construction and operations.

Local communities along the route will benefit from upgraded infrastructure, employment, property tax revenues, procurement and more.

Small businesses will see opportunities in construction, transportation, accommodation, equipment, environmental services and other local goods and services.

Indigenous communities will benefit from equity participation, with a minimum 10 per cent ownership interest in the project, plus the potential for formal impact benefit agreements, contracting opportunities, training and employment.

A PIPELINE TO PROSPERITY

Pacific Link will connect Canada to new trading partners, more jobs and increased revenue.

2X

more Alberta oil reaching global markets

$20B

increase in annual GDP

140K

direct and indirect jobs

$68M

in tax revenues for Alberta and British Columbia local governments

More trade partners. More choices.

By opening new horizons for more Canadian oil, Canada can further its leadership role in protecting global energy security while creating greater wealth and stability at home.

For Albertans, British Columbians and all Canadians, Pacific Link will transform the possibilities by giving Canada more choices. Choices about where we sell our energy. Choices about who we trade with. And choices about how we build a strong, resilient economy.

ECONOMIC INDEPENDENCE

Through a new oil pipeline that connects Alberta's oil resources to Canada's west coast, Canada will receive a higher value for Canadian energy, expand global trade and reduce reliance on a single market.

INDIGENOUS PARTICIPATION

Meaningful Indigenous engagement, consultation, participation and equity partnership opportunities are central to the development of Pacific Link and will inform the project as it advances.

ENVIRONMENTAL STEWARDSHIP

Building on Canada's existing, tested, robust safety and conservation frameworks, Pacific Link will strengthen marine and pipeline safety.

About Pacific Link

Pacific Link will span up to 1,250 kilometres from central Alberta to Canada's west coast, enabling Canada to connect up to one million barrels of oil per day to Asia-Pacific and other fast-growing energy markets.

Pacific Link is being advanced by the Government of Canada (through the Crown Corporation Trans Mountain Corporation), the Government of Alberta (through Alberta Petroleum Marketing Commission) and Pembina Pipeline Corporation.

The pipeline has been listed as a Project of National Interest under the Building Canada Act, a designation given to nation-building projects that help connect our economy, diversify our industries and trade and create high-paying careers.

A new pipeline from Alberta to the British Columbia coast will expand market access for Canadian energy while supporting Canada's prosperity, economic security and sovereignty.
