PACIFIC LINK

FACT SHEET

Project overview

Pacific Link, a new pipeline from central Alberta to Canada's west coast, can create a stronger, more secure, more resilient country by delivering our abundant oil resources to growing markets in the Asia-Pacific region and beyond.

Countries around the world are seeking reliable energy trading partners, and Canada has the resources, expertise and regulatory rigour to meet this demand.

A pipeline that connects oil resources in Alberta to Canada's west coast can bring economic benefits to Albertans, British Columbians and all Canadians.

Pacific Link will consist of a receipt terminal in Alberta that collects crude oil, a high-voltage power line, a long-distance transmission pipeline that carries the oil from Alberta to British Columbia and a delivery terminal and marine facility that stores the oil and transfers it to tankers that transport it to global markets. This significant new infrastructure will be capable of transporting up to one million barrels per day of Alberta oil.

The receipt terminal, located in the Bruderheim area of central Alberta, will serve as a central hub where crude oil from various provincial pipelines is received, measured, stored and readied for transport to Canada's west coast.a

The pipeline route will span up to 1,250 kilometres between Alberta and British Columbia, following the path set by existing infrastructure where possible to reduce new land disturbance.

The delivery terminal, to be located in the Delta area of British Columbia, will receive and store oil delivered by the pipeline. The marine facility will berth tankers as oil is loaded onto them for transport to Asia-Pacific and other global markets.

A PIPELINE TO PROSPERITY

Pacific Link will connect Canada to new trading partners, more jobs and increased revenue.

2X

more Alberta oil reaching global markets

$20B

increase in annual GDP

140K

direct and indirect jobs

$68M

in tax revenues for Alberta and British Columbia local governments

A uniquely Canadian initiative

Pacific Link is being advanced through a collaboration among the federal government, Alberta's government and Pembina Pipeline Corporation.

On October 1, 2026, the Government of Canada listed Pacific Link as a Project of National Interest, confirming its importance to Canada's prosperity, economic security and national autonomy. Indigenous, community and stakeholder engagement will help to guide the project.

ECONOMIC INDEPENDENCE

Through a new oil pipeline that connects Alberta's oil resources to Canada's west coast, Canada will receive a higher value for Canadian energy, expand global trade and reduce reliance on a single market.

INDIGENOUS PARTICIPATION

Meaningful Indigenous engagement, consultation, participation and equity partnership opportunities are central to the development of Pacific Link and will inform the project as it advances.

ENVIRONMENTAL STEWARDSHIP

Building on Canada's existing, tested, robust safety and conservation frameworks, Pacific Link will strengthen marine and pipeline safety.

About Pacific Link

Pacific Link will span up to 1,250 kilometres from central Alberta to Canada's west coast, enabling Canada to connect up to one million barrels of oil per day to Asia-Pacific and other fast-growing energy markets.

Pacific Link is being advanced by the Government of Canada (through the Crown Corporation Trans Mountain Corporation), the Government of Alberta (through Alberta Petroleum Marketing Commission) and Pembina Pipeline Corporation.

The pipeline has been listed as a Project of National Interest under the Building Canada Act, a designation given to nation-building projects that help connect our economy, diversify our industries and trade and create high-paying careers.

A new pipeline from Alberta to the British Columbia coast will expand market access for Canadian energy while supporting Canada's prosperity, economic security and sovereignty.
