Structural Engineer to Associate

JOB REFERENCE	FUS-0008
LOCATION	London
SALARY	Up to £58,000
EMPLOYMENT	
HOURS	
WORKING ARRANGEMENT	Hybrid - one day from home

THE CLIENT

FUSION is recruiting structural engineers across engineer, principal and associate level for an established structural consultancy in Central London. The practice works on new-build, refurbishment and specialist structural engineering commissions, with particular experience in complex existing buildings.

The team delivers permanent and temporary works across a range of structural materials. The vacancy can be shaped around the appointed engineer's level, from independent project delivery through to wider technical, client and team leadership.

THE ROLE

You will contribute to the design and delivery of building structures projects from early appraisal through detailed design and construction support. The level of ownership will reflect your experience and may include leading projects, reviewing work and supporting less experienced colleagues.

At principal or associate level, the role will carry greater responsibility for project coordination, client relationships, technical standards and the allocation of work within the team.

KEY RESPONSIBILITIES

- Prepare or lead structural designs for new-build, refurbishment and alteration projects.
- Produce and review calculations, drawings, specifications and technical reports.

- Coordinate structural information with architects, clients, contractors and other consultants.
- Attend design meetings and site visits, communicating technical decisions clearly.
- Manage agreed project tasks, priorities and issue deadlines.
- Support or lead engineers and technicians according to the seniority of the appointment.

PROJECT DELIVERY

- Develop practical structural solutions in steel, concrete, timber and masonry where relevant to the project.
- Contribute from feasibility and survey work through detailed design and construction-stage support.
- Identify risks associated with existing structures, sequencing and temporary conditions.
- Maintain accurate project documentation and follow quality assurance procedures.

REQUIRED EXPERIENCE

- Structural engineering experience gained within a building structures consultancy.
- Ability to prepare clear design calculations and coordinated structural information.
- Experience working with clients, architects and contractors on live projects.
- A relevant civil or structural engineering degree, or equivalent qualification.
- Knowledge of structural design across commonly used construction materials.
- Ability to manage your work reliably and communicate technical matters clearly.

DESIRABLE EXPERIENCE

- Chartered status, or demonstrable progress toward chartership, for senior appointments.
- Experience leading projects or reviewing the work of other engineers.
- Experience with refurbishment, existing buildings or temporary works.
- Proficiency in relevant structural design and modelling software.

WORKING ARRANGEMENTS AND BENEFITS

- One day per week working from home is recorded for this vacancy.

APPLICATION
