Principal/Associate Structural Engineer

JOB REFERENCE	FUS-0051
LOCATION	London
SALARY	
EMPLOYMENT	
HOURS	
WORKING ARRANGEMENT	

THE CLIENT

An established structural engineering consultancy in Central London is appointing a Principal or Associate Structural Engineer. The practice delivers structural design for new-build, refurbishment, basement, temporary works and specialist structures projects.

Its work includes commercial and residential buildings, complex alterations and structural elements requiring close coordination with architects, contractors and specialist fabricators.

THE ROLE

You will lead structural engineering projects and provide senior technical oversight from initial appraisal through design and construction. The role combines project delivery, client coordination and review of work prepared by engineers and technicians.

The balance of technical leadership, team responsibility and client management will reflect the appointed engineer's confirmed experience.

KEY RESPONSIBILITIES

- Lead structural design and delivery across multiple building projects.
- Review calculations, drawings, specifications and technical reports before issue.

- Allocate and coordinate work across engineers and technicians.
- Represent the consultancy in client, design-team and contractor meetings.
- Resolve complex structural and construction-stage issues through practical design solutions.
- Maintain clear communication on scope, programme, technical risk and project priorities.

PROJECT DELIVERY

- Oversee projects from feasibility and survey work through detailed design and site support.
- Apply appropriate checking, quality assurance and document-control procedures.
- Coordinate structural information with architectural, services and specialist design packages.
- Support resource planning and the professional management of project delivery.

REQUIRED EXPERIENCE

- Substantial structural engineering experience within a UK building structures consultancy.
- Ability to lead projects and review structural designs across common construction materials.
- Experience managing engineers or technicians and coordinating multidisciplinary information.
- Strong client-facing and technical communication skills.
- A relevant civil or structural engineering degree, or equivalent qualification.
- Sound knowledge of UK design standards and construction practice.

DESIRABLE EXPERIENCE

- Chartered Engineer status through IStructE or ICE.
- Experience with refurbishment, basements, temporary works or specialist structures.
- Experience supporting fee proposals, resource planning or project commercial management.
- Proficiency in relevant structural analysis and modelling software.
