Senior Structural Engineer

JOB REFERENCE	FUS-0077
LOCATION	Leeds
SALARY	
EMPLOYMENT	
HOURS	
WORKING ARRANGEMENT	

THE CLIENT

An independent civil and structural engineering consultancy is appointing a Senior Structural Engineer to its Leeds team. The practice works across residential, commercial, industrial, education, healthcare, heritage and infrastructure projects throughout the UK.

The team designs in steel, reinforced concrete, timber, masonry and mixed materials and remains involved from early structural advice through detailed design and construction support.

THE ROLE

You will lead the delivery of structural engineering projects, combining hands-on design with coordination, client contact and mentoring of less experienced colleagues.

The role suits a Chartered Engineer, or an engineer already operating at chartered level, who can apply sound principles and critically review the assumptions and outputs behind design software.

KEY RESPONSIBILITIES

- Lead structural design work across a range of sectors and common building materials.
- Prepare and review calculations, drawings, specifications and technical reports.

- Coordinate structural information with clients, architects, contractors and other disciplines.
- Identify practical design and buildability issues and develop proportionate solutions.
- Mentor junior engineers and support the checking of their work.
- Develop client relationships while maintaining clear project communication.

PROJECT DELIVERY

- Manage assigned projects from early design through detailed delivery and construction support.
- Maintain technical quality, programme awareness and accurate project records.
- Coordinate changes and respond to queries during design and construction.
- Apply relevant standards and internal checking procedures to issued information.

REQUIRED EXPERIENCE

- Chartered Engineer status, or a proven track record operating at chartered level.
- Structural engineering experience gained within a consultancy or comparable design environment.
- Experience leading project delivery across common structural materials.
- Ability to understand and challenge the principles, inputs and assumptions behind software results.
- Experience coordinating with clients and multidisciplinary project teams.
- Clear written communication and the ability to mentor other engineers.

DESIRABLE EXPERIENCE

- Experience across multiple project sectors and both new-build and refurbishment work.
- Familiarity with a range of structural analysis and design software.
- Experience developing client relationships.
- Experience supporting colleagues through professional qualification.

WORKING ARRANGEMENTS AND BENEFITS

- Published benefits include 25 days' annual leave, increasing with service, plus bank holidays.
- A discretionary bonus may be paid twice each year, subject to market conditions and individual contribution.
- The package includes NEST pension contributions and private health insurance after six months.
- Up to two professional subscriptions are paid, with support toward professional qualification where applicable.
- An optional charity day and access to an ICE training scheme are also offered.

APPLICATION
