Chartered Structural Engineer - Team Lead

JOB REFERENCE	FUS-0124
LOCATION	London
EMPLOYMENT	Permanent
HOURS	Full-time
WORKING ARRANGEMENT	Hybrid

THE CLIENT

FUSION is recruiting a Chartered Structural Engineer - Team Lead for an established consulting practice in London. The appointment will add chartered structural engineering authority to a team delivering building-structures work across new-build and refurbishment projects.

The consultancy works across residential and commercial projects, with structural input from early assessment and concept design through detailed design and construction support. The role offers scope to influence technical quality and, where experience supports it, the development of the wider structural team.

THE ROLE

This is a senior technical role for an already-chartered structural engineer who can take responsibility for structural design quality, review engineering work and provide clear technical direction on live projects.

The appointment can be shaped around your experience. An engineer with established leadership experience may take a broader role in allocating workload, mentoring colleagues and shaping technical standards; someone with less formal management experience can still be considered if they are already chartered and able to act as a senior technical authority.

KEY RESPONSIBILITIES

- Lead and coordinate structural engineering design from concept through detailed design and construction support.
- Review structural calculations, drawings, reports and technical information to maintain design quality.

- Develop practical structural solutions for new-build, refurbishment and existing-building work.
- Coordinate structural design with clients, architects, contractors and other project disciplines.
- Provide technical guidance on structural assessments, appraisals, inspections and design reviews where required.
- Mentor engineers and support workload allocation and technical standards where your experience supports this responsibility.

PROJECT DELIVERY

- Work across building-structures projects from early feasibility and concept development through detailed design and delivery.
- Apply sound structural judgement to design reviews, existing-building assessments and technically challenging project decisions.
- Maintain clear, coordinated technical information and support consistent quality-control procedures.
- Represent the structural discipline clearly with clients and the wider design team on matters within your responsibility.

REQUIRED EXPERIENCE

- Current Chartered Engineer status, with CEng and membership of either MStructE or MICE. Chartership is a non-negotiable requirement for this appointment.
- Strong structural engineering experience within building structures, including responsibility for design and technical review.
- Ability to act with appropriate independence as a senior technical authority and make well-supported engineering decisions.
- Experience coordinating structural work with clients and multidisciplinary design teams.
- A sound background in structural design through relevant project stages, including detailed design and construction support.
- Clear written and verbal communication when explaining technical decisions, reviews and recommendations.

DESIRABLE EXPERIENCE

- Experience leading or mentoring structural engineers and helping to develop technical standards.
- Experience across refurbishment, existing-building appraisal or complex alteration work.
- Broader project or client-management experience alongside technical delivery.
- Experience helping a consultancy strengthen technical governance or senior structural capability.

WORKING ARRANGEMENTS AND BENEFITS

- For the right fit, the role can be worked on a hybrid basis with up to three days from home and two days in the London office.
- 20 days' annual leave plus public holidays, with a seven-day Christmas closure.
- Performance-related bonus and potential share options subject to agreed goals.
- Gym membership and Bike2Work scheme.
- Car salary-sacrifice scheme.
