

High-volume agent connectors

Take a look into the architecture of Fivetran's newest connector type

Fast, accurate, and secure high-volume database replication

Utilizing an agent to increase speed and volume, Fivetran's HVA connectors unlock the power of rapid data replication. Learn more about the architecture and benefits below:

Setup details

Oracle: version 11g R2+, multi-tenant architecture, RAC and more

SQL Server: version 2012+, self-hosted, on-premise or in your cloud provider of choice

Create a user with appropriate permissions to read and access logs files for extraction

Enable database logging so Fivetran can access up-to-date change data

Benefits

Light source impact: reads directly from log files instead of a remote user query

Minimize time between syncs: supports 1 minute sync frequency

Heightened throughput: seeing replication speeds greater than 25MBps

Minimal destination setup: utilizes Fivetran's automated schema mapping feature
