

One platform moving the world's data to Microsoft Azure

Fivetran and Microsoft Azure empower businesses to integrate and analyze data at scale, enabling real-time insights and driving AI-powered decision-making across hybrid and multicloud environments.

Why Fivetran + Microsoft Azure?

Fivetran and Microsoft Azure empower enterprises with high-performance pipelines that seamlessly move data into Azure destinations like OneLake, ADLS, Snowflake on Azure, Azure Databricks, and more. This enables real-time analytics and AI-driven insights to help businesses unlock the full potential of their data. With automated schema management, 700+ pre-built connectors, and low-latency data replication, Fivetran ensures accurate, up-to-date data pipelines with 99.9% reliability and enterprise-grade security.

One platform moving the world's data to Microsoft Azure

Benefits of Fivetran + Microsoft Azure

Unify your hybrid and multicloud data stack for AI and analytics.

High-performance, intelligent pipelines integrate data across on-premise, SaaS, and cloud environments.

- Integrate over 700+ SaaS, on-premise, and cloud data sources into Azure or OneLake to create a unified data foundation.
- Deliver fresh, analytics-ready data with pipelines that dynamically adapt to schema changes across hybrid environments, ensuring reliability and scalability.
- Leverage intelligent pipelines to reduce vendor lock-in, enhance interoperability, and support agile business operations.

Democratize AI and machine learning development.

Empower AI/ML workflows with real-time, reliable pipelines built to scale with your enterprise needs.

- Automate data transformation into Delta Lake format in Azure, delivering clean, reliable data for predictive analytics and ML workflows.
- Ensure high data accuracy and consistency with intelligent pipelines that support training machine learning models and driving AI-driven outcomes.
- Process large-scale AI workloads effortlessly with fully managed, real-time pipelines designed to grow alongside your business.

Deliver secure, real-time data pipelines at scale.

Ensure zero downtime and enterprise-grade security with scalable, real-time pipelines optimized for mission-critical workloads.

- Continuously sync fresh data into Azure or Microsoft Fabric, enabling dynamic, real-time dashboards and AI applications.
- Meet compliance standards like GDPR and SOC 2 Type II with Fivetran's built-in, end-to-end security features, including encryption and advanced governance.
- Process billions of rows of data with high-performance pipelines designed for enterprise-scale workloads while minimizing latency.
- Enhance operational reliability with robust pipelines that guarantee zero downtime for mission-critical applications.

"As enterprises choose Azure for their data platform, this integration with Fivetran will allow customers to deploy Fivetran data integration services within Azure. We look forward to this continued collaboration between Azure and Fivetran that will accelerate any organization's ability to transform data into actionable insights."
