

One platform moving the world's data to the Data Cloud

Power every decision with automated and intelligent pipelines, scalable interoperability, and end-to-end security.

Fivetran's one platform moves the world's data to the Snowflake Data Cloud, enabling businesses to unify their data, drive AI/ML innovation, and deliver real-time analytics at scale. With 700+ pre-built connectors, automated schema drift management, and low-latency replication, Fivetran simplifies data integration while ensuring 99.9% reliability and enterprise-grade security. By eliminating complexity and automating pipelines, businesses can seamlessly consolidate siloed data into Snowflake, empowering teams with actionable insights and accelerating data-driven transformation.

Reliable

- 99.9% reliability
- Idempotency and backend data validation
- Snowflake Partner Connect makes it easy to get data flowing within minutes

Scalable

- Real-time speed with <1 minute latency
- Move 60MB of database data per second using CDC
- 700+ connectors for Databases, Marketing, Finance, Sales, and more

Secure

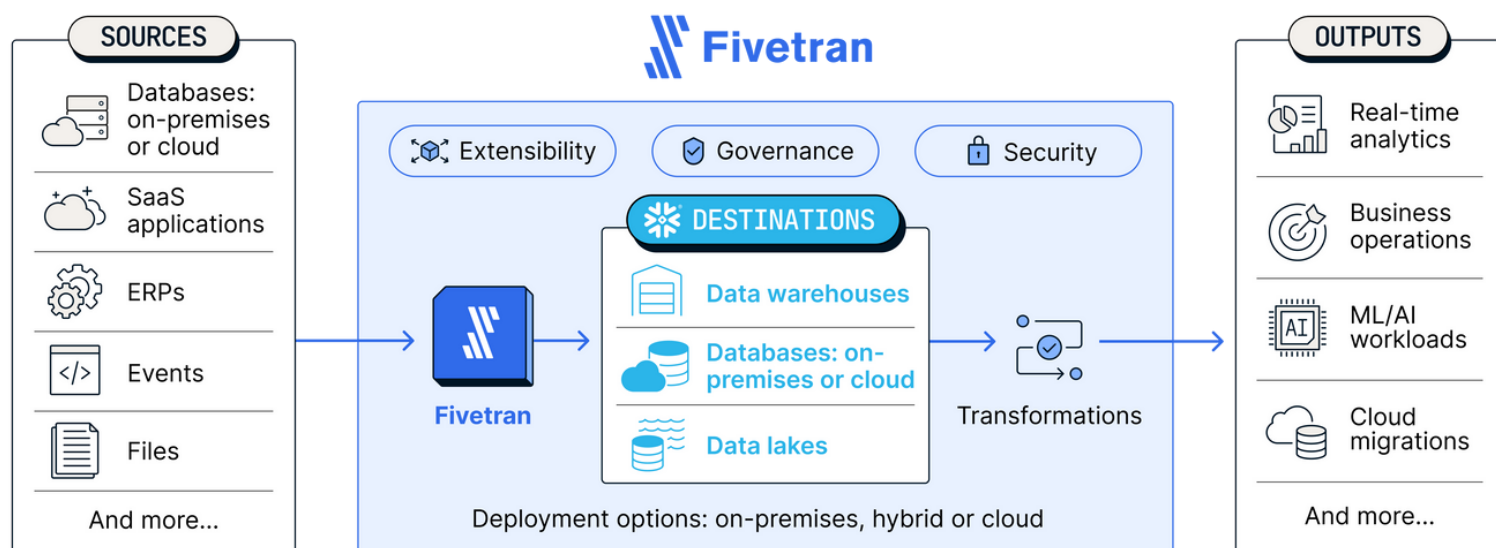

- End-to-end data encryption
- PII is blocked or hashed with column masking before it enters Snowflake
- On-premise, hybrid, and cloud deployment options
- Role based access

Fivetran + Snowflake: Better together

- No use case or industry is too niche with 700+ connectors and custom Lite Connectors
 - 10 Snowflake Industry Competencies: Retail & CPG, Financial Services, Manufacturing, Technology, Healthcare & Life Sciences, Media, Construction & Real Estate, Travel Hospitality, Consulting & Professional Services, and Education
- On-premise, hybrid, and cloud deployment options to fit every customer's needs
- Integrations with dbt Cloud and dbt Core make it easy to connect best-in-breed solutions to create the ultimate Modern Data Stack
- Data ingestion as a managed service frees up valuable resources, empowering teams to work on the highest impact projects

One platform moving the world's data to the Data Cloud

PostgreSQL → Snowflake Fivetran native app

Onboard Fivetran's fully-managed PostgreSQL connector via Snowflake's marketplace! Our PostgreSQL native app leverages our Hybrid Deployment technology and is built on Snowflake Snowpark container services, enabling users to access the connector directly from the Snowflake Marketplace.

"Using Fivetran to replicate data to Snowflake is much faster and easier than using home-grown pipelines to do the same thing — and we know this because we tried it. Fivetran enables us to quickly replicate data from a whole host of source systems into a target database or data warehouse of our choice. This really enables us to break down data silos."

Ashley Van Name, General Manager of Data Engineering at JetBlue
