

Replicate SAP Data, ASAP

Reliably and securely replicate data from your SAP sources to power your analytics, operational efficiencies, and AI initiatives.

Accelerate SAP Insights

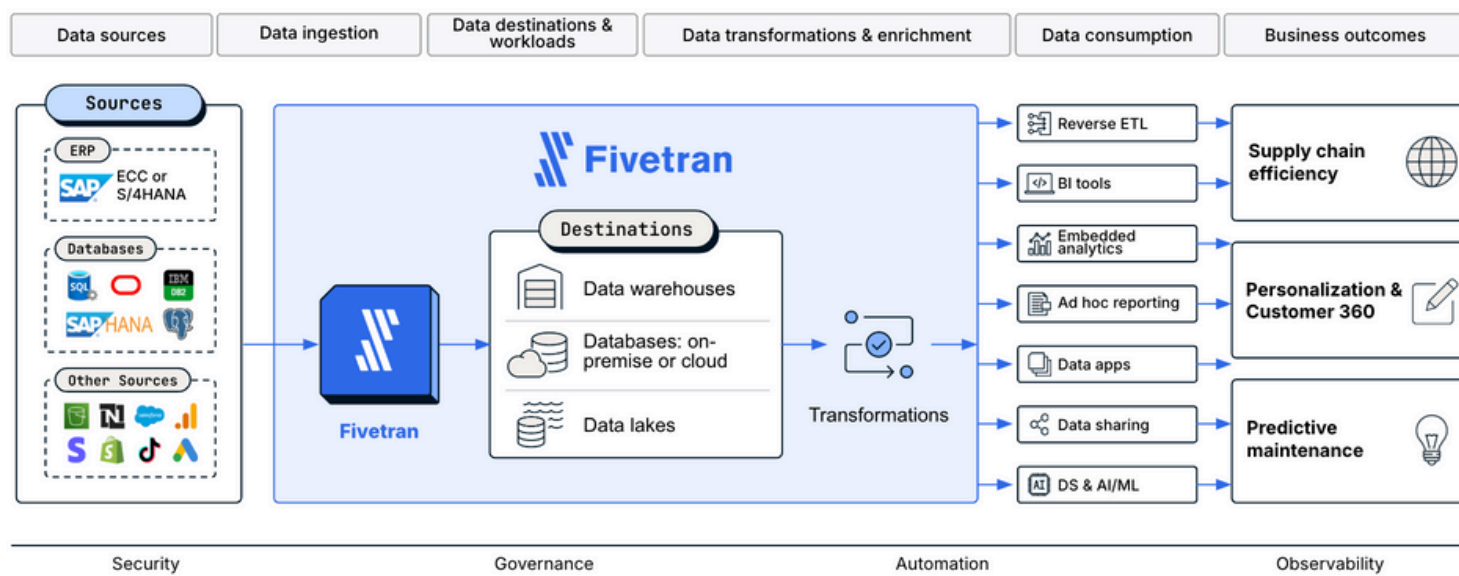

Fivetran is a fully-managed, cloud-native ELT (Extract, Load, Transform) platform, offering integration from 700+ sources to the cloud-based destination of your choice, including SAP to Snowflake.

Connect best-in-breed solutions to create a modern data stack. Fivetran and Snowflake can help your organization unlock the full potential of your SAP data for improved decision-making securely, while remaining in compliance with industry standards and regulations. Free up resources spent building and maintaining data pipelines to focus on more strategic tasks and improve TCO.

Fivetran's replication methods bring maximum efficiency to your unique SAP deployment, offering continuous, real-time change data capture (CDC) from operational database-based systems — including SAP ECC and S/4HANA — that result in a minimal footprint, low latency, and secure data in transit and at rest.

Why Fivetran and Snowflake for SAP data replication

- **Support for Runtime & Enterprise licenses:** Fivetran can connect to SAP's application layer on Oracle and HANA rather than directly accessing the database.
- **Multiple deployment models:** Unlock data from a variety of architectures with Fivetran's SAP data replication capabilities.
- **Special SAP data types & tables:** Handle cluster/pool tables, support long text, transforming SAP dates, loading CDS Views, SAP archiving support.
- **Fast application extraction:** Quickly replicate from the SAP application layer into Snowflake. SAP Rise & SAP HEC supported.
- **Direct and native integration:** From SAP ERP to your destination, whether it's data warehouse, data lake, or another destination.

Deployment options to meet your unique business needs

Securely replicate SAP data and enjoy the benefits of Fivetran with flexible deployment options: SaaS and Hybrid.

SaaS Deployment

The platform is hosted in Fivetran's secure cloud environment.

Hybrid Deployment

The platform is hosted in the cloud but data is processed in your secure environment.

With both deployment options, enjoy the benefits of:

- Support for any license type, including Enterprise and Runtime use cases
- Support for high volume throughput
- Enterprise grade security
- Fast implementation and easy-to-access data, with SAP Rise and HEC support
- Replication from SAP instances on HANA DB, Oracle or SQL Server

"Fivetran has revolutionized our global SAP data delivery, reducing time to insights from days to minutes. We can react swiftly to market changes and track our sustainability efforts at any moment."

Gerardo S. Reyna Caamaño, Global Data Architecture Manager at Cemex

One platform moving the world's data

High performance pipelines to accelerate business outcomes

- 700+ pre-built connectors
- High performance, low impact CDC
- Automated schema drift management and API change
- 99.9% uptime across 3M+ daily syncs
- Streamlined transformation management

End-to-end security to protect your data and reputation

- End-to-end data encryption
- Data governance, observability, and integrity
- Private networking options
- Multiple secure deployment options
- Robust security credentials and clearances

Thousands of leading organizations choose Fivetran + Snowflake
