

Elevate your data into actionable insights with AWS and Fivetran

Accelerate data-driven success with the modern data lake

Fivetran's automated data integration paired with AWS' revolutionary warehousing and scalable data lake capabilities unlock endless opportunities and swift decision making for global enterprises, while helping them maintain data governance and cost efficiency. With 700+ best-in-class connectors and support for Redshift, Sagemaker, Delta Lake on AWS S3, and AWS S3 as a data lake destination, organizations like Coupa, Okta, AutoDesk, Dropbox, and more leverage Fivetran to fuel their future for unlimited possibilities.

Together, Fivetran + AWS provide:

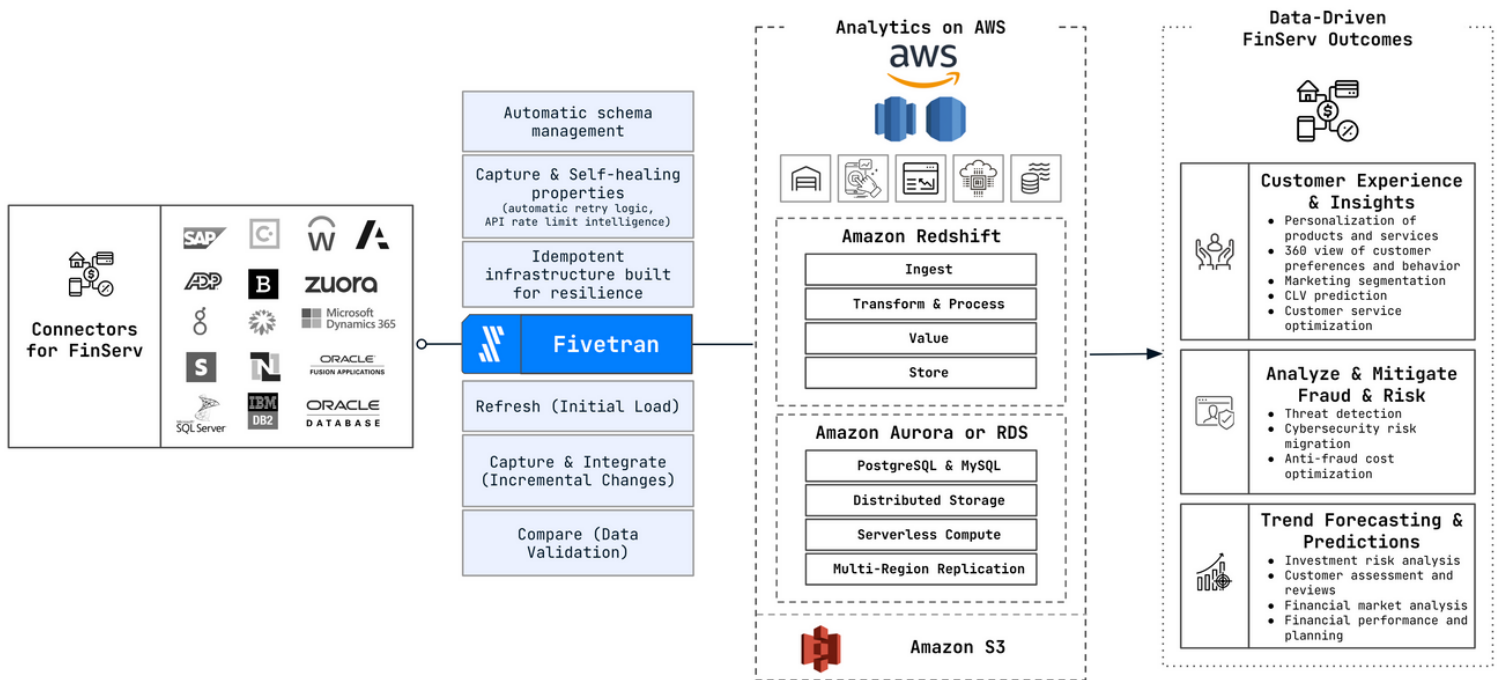

- **Data integration:**
Land data in AWS with end-to-end automation, reliability, and security.
- **Governance:**
Securely accelerate migration of data to the cloud for analytics, saving time and bandwidth for engineering teams in the Enterprise.
- **Automated scalability:**
Accelerate the customer journey to modern data architecture through 190+ data sources including Salesforce and NetSuite.

Easy to use	Automate data integration	Zero-maintenance, fully managed data pipelines
• With hundreds of fully managed data pipelines that take minutes to set up, your data warehouse just got a whole lot easier to use. • Simple setup and packed with automation, your team can focus on insights and operational excellence. • Allows businesses to make more accurate, data-driven decisions. • Automated schema migration and data mapping.	• Automating data helps save time on mundane, slow processes, helps businesses eliminate outdated manual processes, and it simplifies complex tasks into fewer steps, which increases efficiency in those tasks. • Automation brings faster turnaround times, reduction in errors, increased efficiency, and cost saving. • Reduce pipeline downtime due to source API and schemas change.	• Zero-maintenance data pipelines means little manual intervention. • Frees data engineers from updating and maintaining schemas. • ELT architecture, enabling transformations with Amazon Redshift for better performance and less time and cost moving data back and forth.

Financial Services Analytics with Fivetran & AWS

"The data lake is an easy, affordable, secure and robust way to store all our customers' data. The main challenge is in optimizing performance and accessibility, but with Fivetran's support for Amazon S3 with Iceberg it will further optimize our Fivetran pipeline. Since the data lake is our single source of truth, it is critical that all the data ingested from different sources be accessible in the data lake."

— Lakshmi Ramesh, Vice President, Data Services at Tinuiti
